Dear Amber,

I have spoken to the applicants who have confirmed my initial thoughts on the AD Plant and its ongoing operational importance.

Specifically, the existing AD plant is the cornerstone of Barfoot's operation both in terms of its sustainable credentials and the importance their customers place on this; and their efficient operation of the enterprise. The plant provides the vast majority of the power used on site and provides a substantial cost saving against that same power being imported via the grid. Many of their processes are power intensive and therefore their ability to source their own power is highly advantageous.

The current application does not in any way impact on the existing AD or its day to day operation. There is no question of the plant being closed or its output reduced, even during any construction phase.

It should be noted that the AD is critical to the day to operational efficiency and viability of the applicant's enterprise and will be retained.

As an aside you will note that the applicants have also installed solar across much of their extensive roof area which further illustrates their commitment to renewable non-carbon based power.

I trust that this clarifies matters and demonstrates full compliance with Policy W2 of the Waste Local Plan.

Regards

Dear Mr Goodall

P/40/25/PL

I have received comments from WSCC minerals and waste regarding P/40/25/PL.

They require some additional information to address how the proposal would remain compatible with the operational waste infrastructure nearby.

Please are you able to address their comments by the 18th June so I can reconsult them.

Thanks

Amber Willard MRTPI
