Subject: FW: P/48/17/PL

Afternoon Simon,

I had a call earlier from the ecologist working on the site at 251 Pagham Road (P/48/17/PL) confirming that the wildlife buffer area will still be retained on site, though the reptiles would be translocated elsewhere. I am satisfied with this and happy with the proposed amendments.

They have also commented on an objection from the parish council and there request for the reptiles to be reintroduced once the site is complete. I don't feel that this would be in the best interests of the reptiles who will have already been translocation once, and as Adam has stated it would be impossible to only catch the translocated reptiles. It would be more suitable for the wildlife buffer area to be made suitable for reptiles so any local populations can naturally colonise this area in the future.

Many thanks

Liz

Dear Liz,

Further to our discussion please take this email as confirmation that even though the reptile mitigation proposals have now changed to an ex situ relocation to the Brook Meadows LNR, the proposals for a wildlife buffer around the site will still be implemented as per section 6 of my report.

In addition to this, i have attached an objection from the Parish Council below where they are requesting reptiles be re-captured from Brook Meadows and put back into the site which i think we can both agree is entirely unnecessary and somewhat difficult to achieve as we undoubtedly be capturing the actual reptiles from the site itself. It is however hoped that once the buffer reaches maturity any reptiles within the adjacent habitats will recolonise the buffer. If you can perhaps mention this to Simon Davis ADC i'd appreciate it as well.

If you had any queries do please get back to me.

Regards

Adam Jessop MSc
Senior Ecologist
