Subject: hook lane P/6/17/OUT

with reference to above proposal, not a good idea to allow this to go ahead, not because it will spoil the view, but because as on other sites in the area the field in hook lane is a wet site, and it is set higher than the other side of hook lane, a couple of years ago torrential rain flooded hook lane and caused considerable damage, if you allow homes to be built on this site that situation will repeat more often, because if you replace crops with concrete the water will seek another route, and as hook lane is lower than the field it will permeate to the road and hence over to the homes on the other side, there is not adequate drainage in the area to prevent this,

Plus if you keep allowing prime agricultural land to be built on, we will soon have none left, then if trade deals don't materialise or they have more disasters on the continent we won't be able to produce enough food for all these new people that want the new houses that you want to build, a sorry state of affairs,
