Subject: RE: Land N of Summer Lane, Pagham P/70/19/RES - Conditions

Hi Simon

I note the winter monitoring carried out, which didn't include the whole winter. Luckily it captured the known peaks in that particular winter, so the data will suffice. The infiltration testing was carried out without due regard to the recorded peak groundwater levels ie. too deep. It is acknowledged there is a high water table, but there are some areas where shallow infiltration may be possible (via permeable paving). This will require further discussion with the applicant.

The drainage strategy document is purely that – a strategy and does not constitute detailed design. Therefore, an appropriate pre-commencement condition will be required.

This will need to include any offsite improvements which have yet to be formally agreed. In fact, we were waiting for the applicant to arrange a meeting between all interested parties in order to agree a way forward.

Regards

Paul Cann

Subject: Land N of Summer Lane, Pagham P/70/19/RES - Conditions
Importance: High

Hi Paul,

I am proposing to impose the following pre-commencement drainage condition because the drainage condition on the outline requires that the drainage scheme be approved in full through the RM application and as I understand it, we are not able to do this at this time. If I don't put a new condition on, there is nothing to require approval of the drainage scheme.

Development shall not commence, other than works of site survey, ground clearance/preparation and investigation, until full details of the proposed surface water drainage scheme have been submitted to and approved in writing by the Local Planning Authority. The design should follow the hierarchy of preference for different types of surface water drainage disposal systems as set out in Approved Document H of the Building Regulations, and the recommendations of the SuDS Manual produced by CIRIA. Winter groundwater monitoring to establish highest annual ground water levels and winter Percolation testing to BRE 365, or similar approved, will be required to support the design of any Infiltration drainage. No building shall be occupied until the complete surface water drainage system serving the development has been implemented in accordance with the agreed details and the details so agreed shall be maintained in good working order in perpetuity. Reason: To ensure that the proposed development is satisfactorily drained in accordance with policies W SP1, W DM1, W DM2 and W DM3 of the Arun Local Plan. This is required to be a pre-commencement condition because it is necessary to implement the surface water drainage system prior to commencing any building works.

In response, the applicant has stated that:

"In terms of Condition 4, the applicant is of the view that sufficient detail has been submitted with the reserved matters application, including through subsequent additional information and discussion, to enable condition 9 of the outline permission to be discharged, thus negating the need for this condition.

Further, as has been demonstrated the winter groundwater monitoring has been completed and submitted, meaning that any new condition could simply state that:

No building shall be occupied until the complete surface water drainage system serving the development has been implemented in accordance with the agreed details and the details so agreed shall be maintained in good working order in perpetuity.

The reason could then simply read 'to ensure that the site is appropriately drained'. With the revised words there is no reason for it to be a pre commencement condition."

Would you agree to this? As it is a pre-commencement condition, we cannot impose it unless they agree...

Simon
