Darren Norris

Forestry Manager Goodwood Estate

To whom it may concern,

The Monterey Pines at 8 Manor Park, Nyetimber have been reviewed by myself on several occasions over the last 5 years and applied for the removal of one tree and the dead-wooding of the rest. Since that work was completed there has been a further loss of vigour in T1 (as shown on Plan 1). The canopy is now thin and the needles are turning yellow over a wide area with increasing dead-wood. As the tree leans toward the neighbouring house I would recommend the complete removal of the tree.

T2 has lost the bulk of the trunk above the main limbs but does still show good needle coverage and little signs for immediate concern, even with the spread of the two main limbs. Trees T3 and T4 show good needle cover and are healthy from ground observation with no obvious signs of damage or disease at the time of looking. The recommendation is therefore, to dead-wood (> 50mm) the three remaining pines and the removal by hand of the cones over the building to reduce the chances of debris onto the buildings below.

If the application is successful the work would ideally be done between October and December.

Yours faithfully

Darren Norris
