Subject: P/84/21/DOC

Dear Planning,

With reference to Condition 5, CMP, Environmental Health are not satisfied that this condition has been complied with. Please could the applicant review and revise section I 'measures to control the emission of noise during construction' as the current noise control measures are insufficient.

Environmental Health is not satisfied that construction work being carried out during normal working daylight hours is specific enough, please could actual timings be given.

The comment 'Any neighbours are some distance away', whilst not detailed enough is also incorrect. There are houses on both sides and to the rear of the site, literally within a few metres of the site.

Finally, please could the applicant explain what noise protection any reinforced poly-fabric would have? It may well control against dust, but Environmental Health is unsure that this is the correct information in terms of noise control.

Environmental Health requires detailed information on how noise from the site will be controlled to ensure that normal construction work does not result in unreasonable noise for local residents.

At present, Environmental Health is not happy for this condition to be discharged.

Regards

Fiona
