Your references. ADC - P/97/15/PL CDC - SY/15/03053/FULEIA.

Please accept this e mail as my support for the above planning applications. It is imperative that the channel through Church Norton spit be reinstated to it's former position as soon as possible, not only for the defence of sea front properties but for the whole of Pagham, should the beach suffer any more erosion Pagham will be flooded. Which brings me to the Southern water pumping stations which will also flood disabling the clearing of sewage throughout the village. Southern Water are aware of the situation and under their duty of care should also be bringing something to the table to help ensure this does not happen.

Regards.

Graham Puttock (Pagham Resident).
