Attn. Simon Davis

Planning application Ref. P/97/15/PL

I would like *to support this application* to manage the breach of the split.

The beach in its present state has become almost unusable for recreational purposes such a swimming and sailing this is likely to result in the loss of holiday makers and subsequent income from them and some businesses may not survive.

At present there is much on going expense on what have proved to be only temporary works .

Without carrying out these works there is a strong likelihood that substantial flooding will take place around the area as the water finds its own level with a resultant loss of services (sewage,power,water) and indeed possible loss of life.

Delays to reopening the harbour entrance have already caused destruction to what was an important SSSI further delay will cause much more losses.

Failure to reopen the entrance could possibly result in the natural closure of the entrance which will then cause a failure with the Chichester flood drainage sluices.

There have been so many delays to this it is now time for some actions, living close to the sea myself and seeing what is happening in Pagham I do not know how the residents have slept at night.
please work together with all other agencies to speed up this very necessary work.
