

2 The Oaks, Rustington, Littlehampton BN16 2UP

The trees in question all four mature Sycamores in good health an approximately 15 metres tall, over the years the trees have been naturally grown tall and slender and in the start of this year the most mature tree snapped out around 5 metres tall. A property owner has now become increasingly concerned over the height of the remaining trees so the proposed works would be to reduce height of the trees buy around 1.5 meters in height This would not ruin the natural amenity that it provides the landscape and surrounding areas as part of the five year maintenance plan Of the trees. The Sycamore tree on the right hand side in the picture is showing heavy signs of decline in the upper canopy the proposed works would be to reduce the height of this tree by 5 meters to where the natural secondary canopy forms .

. all works will be carried out to British standards 3998/2010
