

Arboriculture Climbing Service

Client - Gabrielle Crimes

Address – 4 Knightscroft House, Sea Lane, Rustington, BN16 2RT

Site – Garden space at Knightscroft

Survey Reference – Corkscrew willow removal

Initial inspection Date – June 2020, 30% of limbs appeared dead.

Tree/ group no - ref T3

Species – Corkscrew Willow

Height (m) - 8m

Crown Spread (rad) - 2m

Stem Count – 4

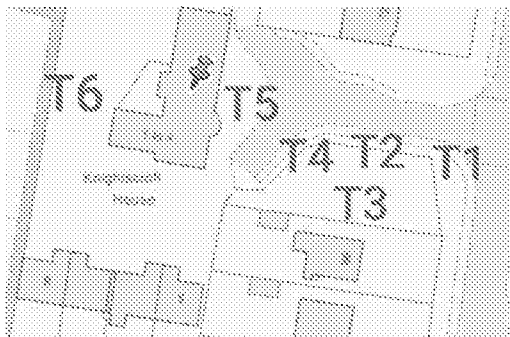

Stem at 1.5 (Dia) - 51 inch

Age – mature

Tree Vitality - Poor

Condition and Observations – Bark decay visible and is coming away from the heart wood, this is evident throughout the tree. All limbs are showing signs of bark decay and in my opinion will fail in due course. I believe the risk for injury is heightened due to its location within the garden.

Preliminary Management Recommendations – It is advised the tree be felled. The customer doesn't want to replant as in the centre of the lawn

Date carried out ... December 2021
