

Planning Officer: Mrs A Gardner

Planning Application Ref: R/197/20/OUT

Location: Croft Works, 52 Mill Lane, Rustington, BN16 3JN

Description of works: Outline application with some matters reserved for the demolition of existing dilapidated storage buildings & erection of 2 No. detached 3-bedroom chalet bungalows with associated car barns, gardens, car parking & landscaping (resubmission following R/117/20/OUT).

Comments on Application:

- I have considered this application by means of a desktop review, using the information and plans submitted as well as online resources. We are being asked to consider Access, Appearance, Layout and Scale.
- The applicant has employed Lizard Landscape Design Ltd to comment on the viability of their scheme in relation to trees influencing the site. Reference to engineering solutions, working methods and tree protection measures are detailed although much of the comment is generic. I support the principle that the scheme is viable, although we must have a site-specific method statement should this application progress. Importantly at this stage, we have not been provided with a Tree Survey inclusive of Root Protection Area (RPA) schedule and Tree Constraints Plan – the minimum detail required by BS5837:2012 for such an application.
- Aerial photography suggests large trees are off-site to the south-west, visible from publicly accessible land and whose nominal root protection areas could be far-reaching. This needs to be established with a tree survey.
- 3rd party trees that overlap this site could be adversely affected by the proposals. There is insufficient arboricultural information submitted with the application. As such, were this application to now proceed, we will not have sufficient information to guarantee such trees would be adequately respected and protected.
- Drainage and service-runs in and out of site have not been shown so there is potential for root protection area incursion to satisfy those requirements.

Conclusion:

- The principle of development as described is certainly achievable without undue detriment to off-site trees, although we are yet to have sight of the necessary arboricultural report and plans to demonstrate this has been properly considered.

Recommendations:

1. The applicants will need to employ the services of an Arboricultural Consultant to carry out a tree survey exercise and then prepare an Arboricultural Impact Assessment (AIA) which must be inclusive of; a 'Tree Survey Schedule', a 'Root Protection Area (RPA) Schedule' and a 'Tree Constraints Plan' – with the trees accurately plotted on same.
2. In the event that a RPA of any tree which is proposed for retention overlaps the development then BS5837:2012 requires that the Detailed Planning Application is accompanied by an Arboricultural Method Statement (AMS) and also most importantly a Tree Protection Plan – to both describe and illustrate the mitigation measures which are to be employed to ensure that the trees survive without detriment to their vigour and vitality and are given adequate protection both above and below ground.
