

Statement regarding tree conditions.

Tree1 – Cordyline

This tree is not subject to a TPO, but is within the conservation area, it is in part of the garden of a listed property. This tree is causing drainage issues as the shedding of its leaves (throngs) has been regularly blocking the drains in walnut avenue and the street. It also has some broken branches and some rotting/thinning of the bark. It is a non-native species and was planted by the current owners around 15 years ago.

Tree2 – Weeping Siler Birch.

This tree is not subject to a TPO but is just within the conservation area, and part of a listed property. It is approx 7 meters tall and has become out of proportion and top heavy, therefore it will benefit from having the crown reduced by 20%, making the resulting height approx. 5.5m. This will balance the tree and reduce the likelihood of it blowing over due to its excessive height and shallow roots.
