Dear Ziyad

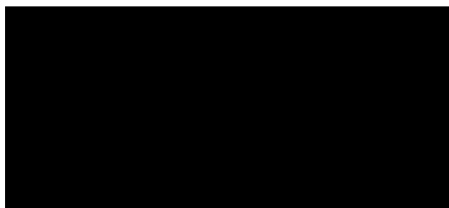

Re: Fleur De Lis, Station Road, Rustington

I am pleased to confirm that the infiltration testing at this site has now been completed and a copy of REC's report has been emailed to you. The testing found some limited permeability at 1m depth but everything below this was considered to be practically impermeable. The report recommends that permeable paving is suitable within the upper permeable soils but that buried soakaways are not appropriate, which matches our previous findings and supports our submitted design.

REC have also provided a summary of their groundwater monitoring, which we were not previously aware of. The highest groundwater level was recorded at 2.2m in February, which also would make buried soakaways a problem.

I trust this is sufficient for your submission to discharge the outstanding planning condition. If you would like to discuss any of the above, then please do not hesitate to contact me.

Yours sincerely

Chris Hendry
