Hi Bernie,

Thank you for your prompt responses to my last few emails.

Regarding the above application, you state that you wish for the Cherry Tree to be replanted instantly as opposed to in 2 years' time. I have spoken with the applicant, and he states that the reason for the time gap is due to evidence of Honey Fungus in the soil.

Also, as it stands Trees 12 & 28 would be removed from the application, unless, the information that has now been provided in the attached document in relation to these two trees satisfies you.

Many thanks,

Zac
