TREE REPORT

Re: Sugar Maple and Cedar

The Sugar Maple is located in the front garden of the property, the tree is approx 40ft high. The tree has been pollarded and reduced many times in the past, always resulting in poor regrowth and die back. As the tree is in such close proximity to the house the canopy needs to be kept to a manageable size.

The Cedar tree is located in the rear garden of the property, the tree is approx 30 ft high and its canopy covers the back patio and conservatory. The tree is in good health and each year puts on new growth which needs to be reduced to maintain shape and allow light into the property.

This is a visual report on the trees current situation; I accept no responsibility for the trees.

Regards,

Nick Wilson.
