Dear Sir

Re Planning Ref R/53/13

5th June 2013

Further to the permitting of this planning application on 12th April 2013, which was subject to compliance with certain conditions, I am writing to advise you of additional action being taken in order to comply with condition 4.

A meeting took place on site 5th June 2013, attending were the applicant – Mr.M. Fitzpatrick : Arun D C Tree Specialist - Mr. J. Brewster: and Mr R.Kift – SERA Tree Representatative.

Following discussions it was agreed to revise the Protection scheme to the Scots Pine trees on the western elevation.

Instead of the 1200mm deep concrete bases and beam arrangement, which was considered by Mr. Brewster to be potentially injurious to the wellbeing of the trees, it was decided to reduce the proposed wall thickness which would allow us to construct a more shallow foundation.

We will now be excavating a 300mm wide strip footing 350mm maximum below the existing ground level : Place concrete 200mm thick and build a half brick wall 110mm wide to match the existing wall on the western elevation.

I trust this action meets with your approval in achieving the objectives set in in condition 4.

Yours Faithfully
