1.0 INTRODUCTION

.....

This report has been prepared in relation to the proposed drainage scheme submitted for the development of the Rustington Convalescent Home, Sea Road, Rustington.

The aim of this report is to explain the detailed site drainage design, including the SuDS components, that are shown on the proposed site drainage layout drawings submitted with this document.

This report has been specifically designed to provide information to enable discharge of conditions 19, and 20 of the consent:

- 19 Construction of Phase Two of the development shall not commence until details of the proposed means of foul and surface water sewerage disposal have been submitted to and approved in writing by the Local Planning Authority in consultation with Southern Water.
- Reason: To ensure that the development is satisfactorily drained in accordance with policy GEN9 of Arun District Local Plan.
- 20 Prior to the commencement of development of each phase full details of the proposed surface water drainage scheme for the relevant phase shall be submitted to and approved in writing by the Local Planning Authority.
- The design should follow the hierarchy of preference for different types of surface water drainage disposal systems as set out in Approved Document H of the Building Regulations, the recommendations of the SUQS Manual produced by CIRIA.
- Winter groundwater monitoring to establish highest annual ground water levels and Percolation testing to BRE 365, or similar approved, will be required to support the design of any infiltration drainage.
- No unit shall be occupied until the complete surface water drainage system serving the property has been implemented in accordance with the agreed details and the details so agreed shall be maintained in good working order in perpetuity.
- Reason : To ensure that the proposed development is satisfactorily drained in accordance with policies GEN7 and GEN9 of the Arun District Council Local Plan.

2.0 LIMITATIONS

.....

This report has been prepared for Millwood Designer Homes in relation to the proposed Rustington Convalescent Home, Sea Road at Rustington, West Sussex. No responsibility is accepted to any third party for all or part of this study in connection with this or any other development.

3.0 EXISTING DRAINAGE

The site currently comprises the Convalescent Home building, ancillary buildings to the rear (north) and access roads.

The Convalescent Home building is to be retained and refurbished by others.

The ancillary buildings are to be retained and redeveloped as new dwellings. The existing accessways are to be replaced with new access roads and parking courts.

The existing drainage has been fully CCTV surveyed and recorded. The findings are shown on the Existing Drainage Plan, drawing 11659/1003 presented in Appendix A. Survey has shown that all the surface water run-off from the existing site discharges unrestricted into the Mewsbrook Park boating lake, immediately to the west.

The total site area (excluding the southern landscaped gardens) = 1.5425 Ha, of which 0.1336 Ha comprise roof areas with positive drainage. The existing accessways are excluded from the greenfield run-off assessment.

The existing surface water run-off calculation is included in Appendix A. The calculation indicates an existing peak discharge rate of 5.3 l/sec for the 1 in 1 year storm event and 18.7 l/sec for the 1 in 100 year storm event.

PROPOSED DRAINAGE

4.0

Condition 20:

The Surface Water Drainage Plan, drawing 11659/1005 is presented in Appendix B shows the outline proposed surface water drainage strategy.

Extensive intrusive ground investigations have been carried out to determine the site-wide geology, groundwater levels and infiltration potential. The most recent shallow infiltration testing results are presented in Appendix C together with a summary of groundwater levels records to date.

A summary of the geotechnical testing is shown on drawing 11659/1002 presented in Appendix D. The existing geology generally comprises topsoil and made ground over sandy subsoils, over chalk.

Groundwater monitoring has been continuing over the winter period, automatically recorded to take into consideration fluctuations due to tidal influence. A summary of the results is included in Appendix C. The records show a peak maximum groundwater level at 1.8m bGL (1.9m aOD).

The subsoils at this depth are typically clayey, silty sands which have returned poor infiltration testing results (3.9×10^{-6} m/sec, 0.014 m/hr).

Recent infiltration testing has been undertaken at 0.8m bGL in order to assess the potential for porous paving discharging by infiltration. The report is included in Appendix C. Results indicate poor infiltration potential in the southern area, which improve northward towards the existing surface water outfall to the boating lake. Tests PP3 & PP4 confirmed infiltration rates of 9.8×10^{-5} m/sec (0.35 m/hr) & 6.0×10^{-5} m/sec (0.215 m/hr) respectively.

Surface water run-off is proposed to be controlled by porous paving with stone sub-bases providing the necessary storage volumes and at depths suitable to receive roof water connections. The minimum formation level is proposed at 2.383m aOD, Proposed services are to be laid within 'dry corridors' across the access roads at locations identified by the services consultants. These crossings provide natural barriers to the general flow of sub-base surface water which follow the natural topography and as such require drainage pipes at the lower levels to provide contiguous sub-bases, conveying surface water to the natural low part of the site.

These link pipes provide control mechanisms from one porous paving zone onto the next. The system as a whole can therefore be designed as a cascading system with consideration to the varying porous paved areas, additional run-off from impermeable areas and variable infiltration rates. The surface water strategy overview is shown on drawing 11659/1005 included in Appendix B.

Microdrainage calculations in Appendix E shows no flooding of the system in a 1 in 100 year + 40% critical storm event.

As it has been demonstrated that the surface water can be disposed of without increased risk of flooding, it is proposed that planning condition 19 is deemed to be satisfied. All surface water run-off from the development site can be disposed of within the site boundary without any need to discharge to the existing Mewsbrook Park boating lake.

5.0 PROPOSED FOUL DRAINAGE DESIGN

Condition 19:

Foul water is proposed to drain by gravity to the existing Southern Water sewer to the north at MH3601, utilising the existing foul drainage connection which currently serves the site.

Connection to the existing public sewer network has been approved by Southern Water under a Section 106 Agreement. Confirmation is provided in Appendix F.

Report by:

David Smith, Civil Engineer

APPENDIX A

EXISTING DRAINAGE LAYOUT 11659/1003 & GREENFIELD SURFACE WATER RUN-OFF ASSESSMENT

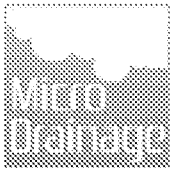

GENERAL NOTES

1. The location, size, depth and identification of existing services that may be shown or referred to on this drawing have been assessed from non intrusive observations, record drawings or the like. The contractor shall safely carry out intrusive investigations, trial holes or soundings prior to commencing work to satisfy himself that it is safe to proceed and that the assessments are accurate. any discrepancies shall be notified to gta prior to works commencing.
2. Tender or billing drawings shall not be used for construction or the ordering of materials.
3. Do not scale. All dimensions and levels to be site confirmed.
4. This drawing shall be read in conjunction with all relevant architects, consultants drawings and specifications, together with H&S plan requirements
5. Copyright : This drawing must not be copied, amended nor reproduced without the prior written agreement of gta.
6. All drawings specifications and recommendations made by gta are subject to Local Authority and other relevant Statutory Authorities approval. Any works or services made abortive due to the client proceeding prior to these approvals is considered wholly at the Clients risk. gta hold no responsibility for resulting abortive works or costs.

1. INTRODUCTION

Ashdown Site Investigation Ltd was requested to undertake in situ infiltration testing and groundwater monitoring at Rustington Convalescent Home, Sea Road, Rustington, West Sussex to assist others with the design of a sustainable drainage system (SuDS) for the proposed development at the site.

The specific objectives of the works were to:

- a) Investigate the shallow ground and groundwater conditions at the specified test locations;
- b) Install a groundwater monitoring stand-pipe and undertake a programme of groundwater monitoring; and
- c) Undertake in situ soakage testing and provide infiltration rates to assist others in undertaking design of SuDS.

The scope of the works covered by this report, and the terms and conditions under which they were undertaken, were set out within the offer letter Q11570, dated 22nd December 2021. The instruction to proceed was received from the client, Millwood Designer Homes Limited.

Previous phases of works have been undertaken at the site, the findings of which have been provided in a Combined Geotechnical and Ground Contamination Risk Assessment¹ and an Updated Quantitative Contamination Risk Assessment and Remediation Strategy².

¹ Ashdown Site Investigation Ltd, Project Ref: P15358, Report Ref: R15023, dated 18th November 2021.

² Ashdown Site Investigation Ltd, Project Ref: P15455, Report Ref: R15125, 12th January 2022.

2. SITE CONTEXT

2.1 Site Location

The site comprises a roughly triangular shaped plot of land located at Rustington Convalescent Home, Sea Road, Rustington, West Sussex and is centred on the approximate Ordnance Survey national grid reference 504320 101530. A site location plan and site plan are presented as Figure 1 and Figure 2, respectively.

2.2 Geological and Hydrogeological Data

2.2.1 Expected Geology and Aquifer Designation

The stratigraphic succession that may be expected to underlie the site is presented in the following table.

Table 1. Expected Strata and Aquifer Designation

Type	Stratum	Aquifer Designation
Superficial	River Terrace Deposits	Secondary A Aquifer
Bedrock	White Chalk Subgroup	Principal Aquifer

The River Terrace Deposits in this area were formerly denoted as the Brickearth and comprises brown sandy (fine) silt or clay largely originating from the solution weathering of the previously existing chalk. The material will have been reworked by water flow to produce some lateral variability in the grain size of the soil (sand and gravel) and can be expected to contain a variable content of flint.

The White Chalk Subgroup comprises a weak, white chalk locally with flint bands together with scattered nodular flints. It may be expected to have a deeply convoluted upper surface as a result of solution weathering. The presence of natural cavities in the chalk is very rare and solution features, if present, can be expected to be infilled with Quaternary deposits such as the River Terrace Deposits. The infill material may be significantly weaker than the surrounding chalk. Solution features can comprise pipes extending to several metres deep into the chalk or conical depressions and basin shaped structures.

The Raised Beach Deposits are shown along the north western boundary of the site. The Raised Beach Deposits consist of marine sand, silt, and pebbly sand, with sandy gravel and 'clean' flint shingle. For the most part the deposit is either bedded or chaotic and may be in the form of dunes, sheets or banks. These deposits are above the level of the present shoreline as a result of earth movement or a general fall in sea level.

2.2.2 Groundwater Source Protection Zones

The site does not lie within an Environment Agency Source Protection Zone.

3. SITE WORKS

The site works included the excavation of a trial pit, designated SA1, to a depth of 1.90m below ground level using a mechanical excavator. In addition, four shallow pits, denoted PP1 to PP4, were each dug to a depth of 0.80m below ground level using hand tools. The intrusive work was carried out on 19th January 2022. The exploratory hole locations are shown on Figure 2.

Falling head soakage testing was undertaken in trial pit SA1 in general accordance with BRE guidance³, with the pit being filled three times on consecutive days.

In addition, infiltration testing was undertaken with the shallow hand dug pits PP1 to PP4 with the pits being filled either once or up to three times depending how quickly the water was draining; testing for the shallow pits being limited to a single day.

Descriptions of the strata encountered and comments on groundwater conditions are shown in the exploratory hole records given in the appendices, together with notes to assist in their interpretation.

³ Section 3.2.3 of Building Research Establishment (BRE) Digest 365, 2016.
Rustington Convalescent Home, Sea Road, Rustington, West Sussex

4. GROUND CONDITIONS

4.1 Stratigraphy

The ground conditions recorded at the soakage pit locations are similar to those encountered during previous phases of works.

4.1.1 Surface Covering

With the exception of trial pit PP3, each of the exploratory holes was excavated through a surface cover of topsoil some 100mm to 200mm in thickness. Within trial pit PP3, asphalt some 30mm thick was recorded.

4.1.2 Made Ground/Reworked

Made ground, generally comprising sandy silty clayey gravel and/or gravelly sandy clay, was recorded to depths of between 0.35m and 0.55m below ground level. The gravel fraction comprised variable quantities of chalk, flint, brick and metal.

4.1.3 River Terrace Deposits

Underlying the made ground/surfacing, the investigation progressed into undisturbed gravelly sandy clays and/or gravelly clayey sands. These soils, considered to represent the River Terrace Deposits indicated on the published geological map, continued to the full depth of the investigation.

4.2 Groundwater Conditions and Stability

Each of the trial pits undertaken for the purpose of soakage testing were recorded to remain dry and stable during the course of excavation.

5. STORMWATER INFILTRATION SYSTEMS

In-situ infiltration testing⁴ was carried out in each of the trial pits. For a majority of the tests the soil infiltration rate (f) was calculated by dividing the volume of water lost between 75% and 25% of the initial test depth by the sum of the average surface area of the sides of the trial pit in contact with the water during the test monitoring period, and its base area. This figure was then divided by the test duration (time taken for the water level to fall between 75% and 25% of the initial test depth) to give the soil infiltration rate in metres per second.

During the test performed within trial pit PP1, the water level within the test pit did not fall below 25% of the initial test depth and calculation of the soil infiltration rate in accordance with the BRE digest was not possible. For this test, the soil infiltration rate has therefore been calculated by dividing the volume of water lost during the test by the product of the average surface area of the trial pit in contact with water during the test period and the test duration in seconds.

The infiltration rates derived from the tests are summarised in the following table.

Table 2. Calculated Infiltration Rates

Exploratory Hole	Test Response Zone Depth (m)		Stratum	Infiltration Rate (f) (m/sec)
	Top	Bottom		
SA1 Test 1	0.49	1.90	River Terrace Deposits	8.2×10^{-6}
SA1 Test 2	0.52	1.90	River Terrace Deposits	4.7×10^{-6}
SA1 Test 3	0.48	1.90	River Terrace Deposits	3.9×10^{-6}
PP1 Test 1	0.37	0.80	River Terrace Deposits	2.1×10^{-7}
PP2 Test 1	0.41	0.80	River Terrace Deposits	5.8×10^{-6}
PP3 Test 1	0.48	0.80	Made Ground and River Terrace Deposits	1.4×10^{-4}
PP3 Test 2	0.41	0.80	Made Ground and River Terrace Deposits	1.4×10^{-4}
PP3 Test 3	0.40	0.80	Made Ground and River Terrace Deposits	9.8×10^{-5}
PP4 Test 1	0.47	0.80	River Terrace Deposits	2.0×10^{-4}
PP4 Test 2	0.42	0.80	River Terrace Deposits	9.5×10^{-5}
PP4 Test 3	0.40	0.80	River Terrace Deposits	6.0×10^{-5}

The value 'f' is equivalent to the soil infiltration coefficient 'q' quoted in the Construction Industry Research and Information Association (CIRIA) Report 156.

⁴ Conducted in general accordance with the requirements of BRE 365, Soakaway Design.

R15157

The results from the infiltration tests indicate that the made ground and River Terrace Deposits possess poor to moderate infiltration characteristics. The results from the infiltration tests should be provided to engineers responsible for the design of the drainage system.

To comply with building regulations⁵, point discharging infiltration systems (conventional ring or trench soakaways) are required to be constructed a minimum of 5.0m away from proposed or existing buildings.

1 Symbols and abbreviations

Samples

U	'Undisturbed' Sample: - 100mm diameter by 450mm long. The number of blows to drive in the sampling tube is shown after the test index letter in the SPT column.
U _o	Sample not obtained
U*	Full penetration of sample not obtained
Pi	Piston Sample: 'Undisturbed' sample 100mm diameter by 600mm long.
D	Disturbed Sample
R	Root Sample
B	Bulk Disturbed Sample
W	Water Sample
J	Jar Sample (sample taken in amber glass jar fitted with gas tight lid)
T	Tub Sample
Vi	Vial Sample

In situ Testing

S	Standard penetration test (SPT): Using the split spoon sampler.
C	Standard Penetration Test (SPT): using a solid cone instead of the sampler - conducted usually in coarse grained soils or weak rocks.
V	Shear Vane Test: Undrained shear strength (cohesion) (kN/m ²) shown within the Vane/Pen Test and N Value column.
H	Hand penetrometer Test: Undrained shear strength (cohesion) (kN/m ²) shown within the Vane/Pen Test and N Value column.
P	Perth Penetrometer Test: Number of blows for 300mm penetration shown under Vane/Pen Test and N Value column.

Excavation Method

CP	Cable Percussion Borehole
WLS	Dynamic Sampler Borehole using windowless sampler tubes
WS	Dynamic Sampler Borehole using window sampler tubes
TP	Trial Pit excavated using mechanic excavator
HDP	Trial Pit excavated using hand tools

2 Soil Description

Description and classification of soils has been carried out using as a general basis the British Standard Geotechnical investigation and testing – Identification and classification of soil, Part 1 Identification and description (BS EN ISO 14688-1) and Part 2 Principles of classification (BS EN 14688-2) as well as the BS5930 code of Practice for Ground Investigations.

3 Rock Description

Description and classification of rocks has been carried out using as a general basis the British Standard Geotechnical investigation and testing – Identification and classification of rock, Part 1 Identification and classification (BS EN ISO 14689-1) as well as the BS5930 code of Practice for Ground Investigations. TCR – Total Core Recovery, SCR – Solid Core Recovery, RQD – Rock Quality Designation, NI – Non Intact, If – indicative fracture spacing (min/ave/max), FI – Fracture Index.

4 Chalk Description

Chalk description is based on BS EN ISO 14688, BS EN ISO 14689 and BS5930. The classification of chalk generally follows the guidance offered by the Construction Industry Research and Information Association (CIRIA) C574, 'Engineering in Chalk'. This is based on assessment of chalk density, discontinuity and aperture spacing, and the proportion of intact chalk to silt of chalk.

APPENDIX D

GEOTECHNICAL SUMMARY PLAN 11659/1002

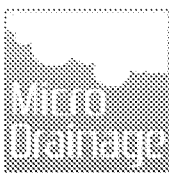

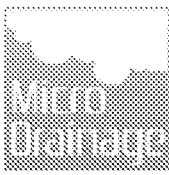

ALSO TO BE READ IN CONJUNCTION WITH THE INFILTRATION TESTING REPORT
BY GEO-ENVIRONMENTAL, REF GE16334, DATED 28th FEBRUARY 2018; TP1 - TP3

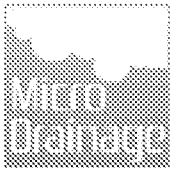

SA1 - SOAKAWAY INDICATED ON DRAINAGE STRATEGY.
INFILTRATION TESTING TO BE CARRIED OUT JUST ABOVE
ANTICIPATED GROUNDWATER HORIZON AT 2.5m bGL.
(STRATIGRAPHY TO BE RECORDED)

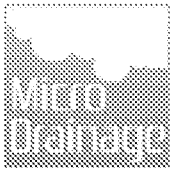

APPENDIX E

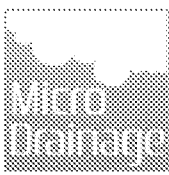

PROPOSED DRAINAGE MICRO-DRAINAGE CALCULATIONS

APPENDIX F

SOUTHERN WATER SECTION 106 APPROVAL

from
**Southern
Water**

Mr David Smith
Gloucester House
66a Church Walk
Burgess Hill
West Sussex
RH15 9AS

Your ref

Our ref
3636

Date
18 February 2022

Contact

Dear Mr Smith,

Application to Connect to the Public Sewerage System - Section 106 Water Industry Act 1991.
Location: Rustington Convalescent Home, Sea Road, Rustington, Littlehampton, West Sussex, BN16 2LZ.

We refer to your recent application to connect to the public foul sewer at the above location. We are pleased to advise that your proposal, as shown on your drawings 11659/1901 and 11659/1902 Revision P1 dated 28/01/2022, is approved by Southern Water. However, approval is subject to some conditions, which are included below.

Means and Mode Only

This review is for the purpose of approval to permit communication to be made to the public sewer, under Section 106 of the Water Industry Act 1991. **It is to the means and mode of construction only.**

What Comes Next?

To progress, select the 'Accept' option on the Get Connected customer dashboard. Or, if you have further questions, please select the 'Query' option. If you do not wish to progress with the application the please select the 'Withdraw' option.

Now you have received our approval, you will now need to arrange with your contractor to carry out your works on site to connect into our sewer.

Once you have done this, please select 'Ready for Inspection' on your Get Connected customer dashboard then inform Mick Vince our Assistant Adoption Manager for this area  that your site is ready for inspection. Please give at least two full working days' notice for a mutually convenient date and time for the inspection of the works to be arranged.

Southern Water, Southern House, Yeoman Road, Worthing, West Sussex BN13 3NX
southernwater.co.uk

Southern Water Services Ltd, Registered Office: Southern House, Yeoman Road, Worthing BN13 3NX Registered in England No. 2366070

If Your Plans Change

- We reserve the right to immediately disconnect any development under S109 of the WIA 1991 where it has been shown actual connections do not reflect those applied for in the S106 application.
- If there is any change in the intended connection point, then you must provide us with revised drawings and details and obtain our approval for the changes prior to the connection being made.
- Our approval is given based on the information provided in support of this application and the assumption of the final discharge point being to the public foul sewer. If this point of connection changes without our approval, then this approval letter becomes invalid.

Capacity and Planning Conditions

- S106 approval does not confirm that public sewer network capacity is available for the proposed development. The availability of capacity may be assessed through the Pre-Planning Enquiry process.
- This letter should not be considered as approval by Southern Water to the discharge of any relevant Planning Conditions relating to drainage. This is a separate matter which will be reviewed under a consultation from the Planning Authority.

Design Guidance and Health & Safety

- Connections to existing/new Southern Water assets (i.e., manholes) and the arrangement of Southern Water assets (i.e., pipe junctions within manholes) should be in accordance with the new Design and Construction Guidance manual ("the Code") and Southern Water's guidance documentation.

water.org.uk/sewerage-sector-guidance-approved-documents/

- Please note that surface water must not communicate with the public foul sewers.
- If connection is to be made through land which is under the ownership of other Parties, then you are advised to obtain the Landowners consent before carrying out any works.
- In approving this application, it is assumed that you have obtained any necessary Building Regulations Approvals and will seek, if relevant, a Highway Authority Road Opening License before any works take place.
- We refer you to the Southern Water Health and Safety Advisory that can be viewed in the Developer and Builders section of the Southern Water website as the link below:

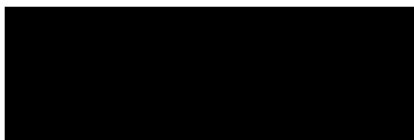

southernwater.co.uk/developing-building/health-and-safety

Southern Water, Southern House, Yeoman Road, Worthing, West Sussex BN13 3NX
