Dear Anita,

Please submit the following as Environmental Health's response to this application:

"The applicant shall provide a Noise Consultant's report to predict the impact of noise from the playground at the nearest noise sensitive location & propose mitigation measures to prevent significant impact on the amenity of the residents of adjacent premises. Consideration should be given to reducing the current noise impact of playground noise on residents by reducing the hours of outside play and the number of children at play, or a combination of both until full and/or alternative mitigating measures are in place".

Thanks.

Fiona
