Detail | Product Specification | Delivery Information | Product Tags

Sandstone is a classic sedimentary rock that forms from the cementing together of sand sized grains forming a solid rock. It is a very stable product and one of the best suited natural stones for use on patios, paths and driveways.

Nustone's Indian sandstone paving slabs are accurately hand dressed with a natural riven surface, creating an extremely hard wearing and durable natural paving stone, ideal for use on patios, paths and driveways. Indian sandstone paving slabs are perfect for both traditional and contemporary designs, they can be laid internally and externally enabling a natural transition from home to garden.

Nustone's Autumn Brown Indian sandstone paving is supplied in a fifty seven piece patio kit with four sizes for random laying. There is a blend of light and dark brown tones with a mixture of plum and grey tones. The thickness of these hand cut slabs can vary between 20-30mm.

Suited to the British climate, natural sandstone paving slabs are frost resistant. They will weather to give a natural appearance enhancing your patio, path or driveway.
