Dear Belinda

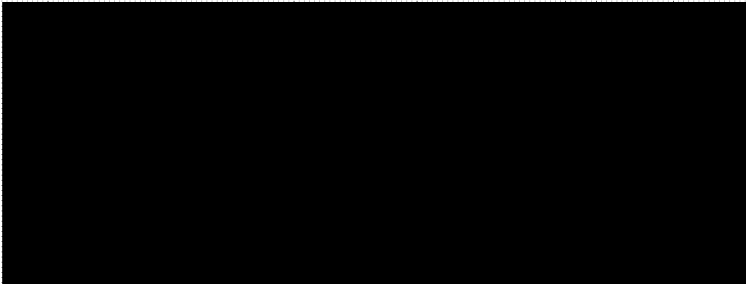

Thank you for getting me over to take a look at the following trees which overhang your rear west boundary. These trees being situated in the Dower House grounds to your west.

Mature Red Oak - This tree grows out over your garden. Its canopy predominantly growing towards the east, due to the larger overpowering Beech tree, to its west. I recommend removing three of the lowest lateral limbs on the tree's east side, back to the trunk. The upper canopy can be pruned back on the east side by 1.5 Meters, leaving the easterly spread approximately 3.5 meters.

Large White Beam - Prune back the branches overhanging your garden by 1.5 meters, leaving a 2.5 meter easterly spread on the tree.

Mature Macrocarpa - Prune back the branches overhanging your garden. This will involve removing approximately 1.5 meters of growth leaving a north easterly canopy spread of 3 meters.

If you require more details on the above, they will gladly be provided.

John Bentley (NDarb)
