

Walberton House, The Street, Walberton, BN18 0PJ

UPPER FLOOR and ROOF: FOUL DRAINAGE STATEMENT

This proposal does not involve the creation of any new residential units, but does comprise forming one additional bedroom and alterations / improvements to existing rooms to make them more usable as bedrooms, together with new WC and bathing facilities on the upper floor. At ground floor level the Cloakroom / WC is to be repositioned, with a drain connection formed into an existing private foul manhole adjoining the house.

All the residential units forming this group are served by private drains that connect together to form a public sewer leading to a discharge point into the public foul drainage system in The Street.

No cesspool or septic tank sewerage is used to drain any part of the site.
