

Red Cottage The Street Walberton BN18 0PQ

The first tree in question is a mature Turkey Oak in good health. This tree is located along the rear western boundary to Red Cottage and overhangs the adjacent house. The tree is a fantastic specimen and provides a good amity value to the surrounding area. The tree is located within close proximity to the neighbouring property and its canopy is currently overhanging the property.

We are keen to maintain the tree at a sensible size long term, so the proposed work would be a 2 metre crown reduction this would keep all pruning wounds to below 100mm in diameter which would be in accordance with British standards BS3998:2010.

The 2nd and 3rd trees are mature Robinas in good health. Again from a long term point of view we are looking at maintaining the trees at a sensible size the proposed work would be a 1.5 metre crown reduction. This again would be in accordance with British standards BS3998:2010.
