Dear Nigel

RE: Mature Monterey pine situated at the east end of your garden.

As a result of the limb loss that this tree has incurred in recent winds, I recommend the following works.

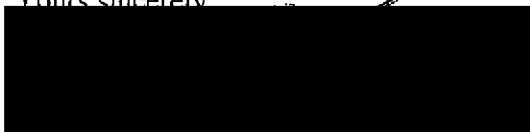

1. Removal of all major dead wood .
2. Lightly tip back the larger lower lateral limbs . This is mainly needed on the trees south side where it grows out towards Mr Norman's property, over the road. When doing this it is important not to take more than 10% of the active needle growth from each limb.
3. Remove the damaged limbs/spurs which do not support any foliage. There is one large limb/spur from the recent wind , situated on the east side of the tree's canopy.

Cost to carry out the above works

Above prices include the removal of all rubbish leaving the site tidy upon completion of the works.

All works will be carried out to British Standard 3998 and be covered by the necessary insurance, at present we operate under £10 million public and product liability insurance

Yours sincerely

John Bentley NDarb
