

Tree number T1

Silver Birch Work — Crown reduction by upto 3 metres

This tree is around 50 years old and over 15m in height with a spread of 11m and less than 8m from the house. The tree is too large for the garden dominating the position and crowding out the other trees and beds.

Given its size I propose to crown the tree by upto 3 metres and reduce the spread by upto 1.5 metres all round.
