Dear Mr Murray,
Please can you indicate the vehicle as a rectangular shape to demonstrate that it fits within the turning area
Thanks
Anita

Dear Mrs Gardner

I attach amended plan as requested. I would point out, however, that the dimensions of the turning area have been stipulated by the client based upon the turning circle of his cars.

Regards, Tim Murray

Dear Mr Murray,

Thank you for the drawing . Can you amend the note referring to 'edge of foliage' to say 'edge of retained foliage' and include a diagrammatic swept path within the parking /turning area to show that it is possible to park a car within the garage and reverse turn and exit the site, either on the submitted plan or an additional plan?

Thanks

Anita

Dear Mr Murray,

Following on from the Member site visit this morning please can you provide a site plan to clearly indicate the following: how the garage will be accessed from within the site ie. a swept path analysis which will define an area of parking/turning in front of the garage doors. In addition, retention of the side boundary planting was discussed and your

client indicated that he was willing to retain this hedging and this should also be indicated on the plan. The limit of retained planting should therefore be clearly indicated across the site frontage and along the side boundary. Without prejudice, I would appreciate receipt of this information by 16th July 2015.

Regards

Anita Gardner
