## TREE REPORT

Re: Large Eucalyptus (Eucalyptus globulus)

The tree is approximately 40 ft tall and has become an unsuitable size for its location. With many heavy limbs in the upper crown and on the south side, there is a risk of the tree becoming hazardous in high winds. It is in close proximity to the owners property as well as various telephone wires and Barnham Lane to the North.

Recommendation:

To reduce the height of the canopy by approximately 4 metres (40%) and reduce weight in the limbs on the south side e.g 2meters to rebalance shape.

This is a visual report on the trees current situation; I accept no responsibility for the trees.

Regards,

Nick Wilson.
