Hi Zac

I undertook my site/tree assessment earlier today.

The tree is a mature *Eucalyptus* of approximately 16m height and 5m spread. It is visible to traffic travelling through the village and from surrounding properties.

Whilst appearing from a distance to be in a state of good health, it is of moderate form only, having previously been subject to heavy crown reduction work at around 9m height. It is close to a neighbouring mature roadside tree which has partially suppressed uniform crown renewal. The resultant regrowth has been asymmetrical, predominantly vertical and has almost doubled the tree's height - therefore would be of concern to the owner during periods of inclement weather.

The extent of crown reduction now proposed is acceptable as it seeks to achieve a reasonable degree of structural integrity appropriate for its location without harming the long-term vitality of the tree or unduly diminishing the character of surrounding area.

As the 6week notice period has now expired I recommend we decide not to make an Order and consider advising the applicant they can proceed.

Regards,

Mark
