Dear Mr Hall,

Town & Country Planning Act 1990 (as amended)

Town and Country Planning (Development Management Procedure) (England) Order 2015

Approval of details reserved by condition imposed under ref WA/62/20/PL relating to Condition Nos 3 - surface water drainage, 4 - discharge flows to watercourses, 5 - maintenance & management of surface water drainage, 6 - hard & soft landscaping, 7 - Construction Management Plan, 8 - ecology, 12 - cycle parking, 13 - archaeology, 16 - contamination and 17 - verification report.

Lower Farm Yapton Lane Walberton BN18 0AS

Notification regarding the above application:

Condition Number 4

The development shall not proceed until details have been submitted to and approved in writing by the Local Planning Authority for any proposals: to discharge flows to watercourses; or for the culverting, diversion, infilling or obstruction of any watercourse on or adjacent to the site. Any discharge to a watercourse must be at a rate no greater than the pre-development run-off values. No construction is permitted, which will restrict current and future land owners from undertaking their riparian maintenance responsibilities in respect to any watercourse or culvert on or adjacent to the site.

Reason: To ensure that the proposed development is satisfactorily drained in accordance with policies W DM1, W DM2 and W DM3 of the Arun Local Plan. And to ensure that the duties and responsibilities, as required under the Land Drainage Act 1991, and amended by the Flood and Water Management Act 2010, can be fulfilled without additional impediment following the development completion. It is considered necessary for this to be a pre-commencement condition to protect existing watercourses prior to the construction commencing.

Decision:

Arun District Council have decided to **REFUSE details reserved by condition for the following reasons:**

The infiltration testing and groundwater monitoring is satisfactory, but it does not address the other comments made by the drainage engineer. In addition, flotation calculations will be required as a result of the high groundwater. Based upon the groundwater being its highest at the beginning of the monitoring, monitoring commencing in late January, and levels close to surface it will need to be

demonstrated that groundwater is assumed to be at surface level.

Please ensure that no construction is occurring prior to discharge of this condition..

Please do not hesitate to contact the above officer if you require any further assistance.

Yours sincerely

A handwritten signature in black ink, appearing to be 'NC' followed by a flourish and a period.
