Dear Sir/Madam,

RE: Land East of Tye Lane, Walberton – WA/44/14/OUT - Condition 21 (Broadband Strategy)

I write to confirm the broadband strategy for the above development. Our utility partner GTC has confirmed that the site will be sized for 1GB currently, but future proofed for greater capacity. This will be provided through Open Fibre Networks (OFNL).

Residents will be able to choose from the providers listed on the attached Residential Choice Statement (RCS) from OFNL. It will depend on what package the resident chooses to take as to what speeds they will receive. Currently packages are offered up to 360mb as detailed in the RCS based on uptake, as the demand for the larger packages increases the ISP's will add higher speed packages.

I trust this satisfies Condition 21. Please do not hesitate to contact me if you require further information.

Yours sincerely,

Tom Nelson
Technical Coordinator

Voice, Ultrafast broadband and TV networks

Choice of Service Providers on the OFNL Network for Residential Customers.

Introduction

OFNL are passionate about providing quality, value and choice to residents who live in homes connected to its high-speed Fibre-to-the-Home network.

OFNL provides an 'Open Access' network designed to make it easy for service providers to connect and offer choice to residents, however before they can offer service there is a requirement for them to connect to the OFNL fibre network, either locally at the housing development or at OFNL's national hand-off location.

Choice of Service Providers:

OFNL is in discussions with a number of UK telecom brands and actively encourages service providers to connect to the fibre network. OFNL are excited

by this interest and the benefits it will bring to residents and details will be published when new service providers become available.

OFNL enables service providers to meet government targets of offering all residents on the Open Fibre Network Super-Fast broadband. Superfast is defined as greater than 24Mbps. OFNL delivers ultrafast speeds of up to 360Mbps.

There are currently six service providers who can deliver residential services.

Service Providers on the OFNL Network:

Listed below are the details of the residential service providers available across the OFNL network.

The service providers displayed below who deliver services over OFNL's open access network are not affiliated with each other in any way.
