- 10.0 Landscaping
- 11.0 Trees
- 12.0 Appearance
- 13.0 Materials
- 14.0 Access
- 15.0 Sustainability
- 16.0 Flood Risk
- 17.0 Drainage

1.0 Introduction

- 1.1 The application is for temporary planning approval for a single storey side extension to provide interim WC facilities and an entrance foyer to be used until the approved permanent extension (LPA reference WA/54/17/PL) is developed.

2.0 Site Description

- 2.1 The existing building was built in 1847 within a restricted broadly rectangular plot.
- 2.2 The main building has been extended to the rear to provide a knave which has a side door leading to a side ramped access way.
- 2.3 The existing main entrance is via three steep steps to a front door to a porch door very close to the pavement.

3.0 Planning History.

- 3.1 WA/54/17/PL – Side extension to form lobby and WC area – approved 17 January 2018.
- 3.2 WA/40/18/DOC – Discharge of conditions application for the above planning application for materials and surface water drainage provision – approved 16 August 2018.

4.0 Planning Policy

- 4.1 Designation applicable to this site, within the built boundary and the Walberton Village Conservation Area.
- 4.2 Saved policies of Arun District Council Local Plan are **Policy GEN2** - Built-up area boundary, **Policy GEN7** - The form of Development and **Policy AREA2** - Conservation Area.
- 4.3 National planning policies are **PPS1** - Delivering sustainable development and **PP35** - Planning for the historic environment.

5.0 Design Proposal.

- 5.1 The current building suffers from a lack of disabled access facility and a lack of WC facilities. Should a visitor to the church attend, they need to use the side access ramp into the rear of the building and access the church by via the vestry, whereas anyone wishing to use the toilet facilities has to go across the road in the church hall.
- 5.2 The approved (WA/54/17/PL) proposal is to utilise piece of land to the side of church to build a single storey extension to house a new WC area off a new entrance hallway which is opened up to the church by using the structural opening for the existing window for a new doorway.
- 5.3 The position of the new porch will also allow for an adjusted ramp access which whilst it cannot fully comply with Approved Document 'M', it is better than which exists.
- 5.4 The proposed temporary extension allows For an interim facility whilst funds are collected to build the permanent extension hopefully later in the year.

5.5 The building of this temporary extension was commenced in January 2019.

Picture – temporary structure in place.

6.0 Use

6.1 Assembly use for the attendees of the church for services.

7.0 Amount

7.1 The additional floor space created by the development is 6.0 m².

8.0 Site Layout

8.1 The addition is sited to the side of the church in between that and the property to the side known as Lansdown House.

9.0 Scale

9.1 The scale of the proposed extension is considered appropriate to the surroundings, with the existing building whilst being single storey it has a eaves height of around 2.5 metres.

9.2 The new extension is proposed to have a flat roof set at a height that is below that of the boundary wall to the rear. The new extension is subservient in scale and retains the original building as the dominant feature of the building.

- 9.3 The new extension is partially shielded by the wall to the front of the side access with the gate removed for a more compliant ramped approach.

10.0 Landscaping

- 10.1 No changes to landscaping are proposed.

11.0 Trees

- 11.1 There are no trees affected by this development.

12.0 Appearance

- 12.1 The appearance of the proposed extension whilst not entirely sympathetic to the existing building is visually shielded from the street. The siting will not be overbearing to any adjoining properties nor will they detract from the street-scene.

Picture – The view to the rear of the building showing the wall that will visually shield the new extension.

13.0 Materials

- 13.1 Treated plywood clad timber frame walls and green mineral felt flat roof to keep costs to a minimum.

14.0 Access

- 14.1 Vehicular and Transport Links – there will be no changes to the existing arrangement.
- 14.2 Inclusive Access – The access arrangements to and within the new extensions will still lack full compliance with the requirements of Approved Document 'M' to the Building Regulations, however, the standard will be vastly improved and has been agreed with Building Control beforehand.

15.0 Sustainability

- 15.1 All materials will be sourced from a sustainable source where possible and the construction of the extensions will comply with the requirements of Approved Document 'L' of the Building Regulations for energy use.

16.0 Flood Risk

- 16.1 The site is located within Flood Zone 1 as indicated on the Environment Agency plans.
- 16.2 Floor levels will be the same as existing.

17.0 Drainage

- 17.1 Foul water drainage – new drain runs will be taken to existing drains recently laid by the contractors of the housing development next door which are then taken to the existing public foul water sewerage system.
- 17.2 Surface water drainage – the small additional roof area (6.0 m²) drained shall be taken allowed to discharge into the courtyard for the time being – the system for the permanent extension has been approved on the previous application.

Pic – Existing foul water manhole to the rear of the building.
