

Dandara Fontwell Meadows 400 proposed houses.

WA/48/19/res

Dear Sir or Madam,

I most strongly object to the above housing development on Fontwell Meadows Land that is within yards of the South Downs National Park an area of outstanding beauty and amazing natural biodiversity.

Since 1986 Fontwell has seen over 100 new homes built doubling its footprint in this sensitive location the proposed development will turn Rural Six Villages Fontwell into a Small Town with shops and a factory !!! totally ruining this special Sussex Village. Also please note I believe this development doesn't comply with the very latest emissions and green sustainability thus massively increasing the **Carbon Footprint** in Arun District. We simply cannot keep building to this scale and in this way.

I live very near to this proposal and **please note** this land supports a very varied large Group of species the **Door Mouse** definately thrives on the Meadows something that was missed in the developers report 2017 please note this species is endangered and must be allowed to continue to inhabit the Meadows along with the local and **Rare Bats** which again seem to be missed in the developers surveys we see these Bats throughout the year they again thrive on The Meadows.

The Environment Agency are concerned also for the **Natural Water Courses** (Aquafa) that flow beneath The Meadows, this clean natural water supply is used for Household consumption with a borehole and pumping station being only yards from the proposed building site.

I urge Arun District Council to reconsider permitting this huge development on such a special and sensitive site.

Yours faithfully,

Nigel Smith
