**Report supporting recommended Crown lifting oh T1 the Mature Beech tree
by your drive entrance.**

Dear Wendy

Thank you for getting me over to take a look at your lovey Beech tree which you planted some 40 years ago.

T1 – Mature Beech. This tree is in good health. The Main trunk divides at approximately 2.5 meters. The multiple main stems support a spreading canopy which has all the space to continue without causing problems. Due to its location by the drive entrances and the lane, I recommend the tree is crown lifted all around to a height of 3.5 to 4 meters. This will involve removing minor branches leaving pruning cuts no more than 180 mm in diameter.

This work can be done at any time and will not upset the good health of this tree.

If I can be of further help please do get in touch. The above work will require approval from ADC.

Yours sincerely
