1 INTRODUCTION

- 1.1.1 This Technical Note (TN) has been prepared by Bright Plan on behalf of Diversify My Land to support a planning application for access at Land to the South of Black Horse Pub, Binsted Lane, Binsted.
- 1.1.2 The site currently has an existing field access adjoining Binstead Lane at its northeastern corner, however the position of the access on a bend in the road restricts visibility to the east. The proposal would involve the construction of a new field access situated at a point to the west providing improved visibility to serve a new glamping site. The existing and proposed access locations are shown in **Figure 1.1**.

Figure 1.1: Existing and Proposed Access

2 BASELINE CONDITIONS

2.1 Existing Access

- 2.1.1 The site is currently served from direct access adjoining Binsted Lane situated at the northeast corner of the site. The access is c.4.0m wide, with a gate set back c.2.0m from the carriageway edge. The existing access points are shown in **Figure 2.1**.

Figure 2.1: Existing Access

2.2 Binsted Lane

- 2.2.1 Binsted Lane runs north south along the site's eastern boundary, connecting with the A27 to the north. Binsted Lane has a c.4.4m wide carriageway in the vicinity of the site, flanked by grass verge and hedges on both sides. Binsted Lane is subject to a national speed limit (60mph) and is not subject to parking restrictions, however the nature of the road and availability of off-street parking means that on-street parking is uncommon. Binsted Lane's highway features are shown in **Figure 2.2**.

Figure 2.2: Binsted Lane

2.3 Traffic Data

- 2.3.1 A 7-day ATC survey was undertaken between Saturday 1st March and Friday 7th March 2025 to establish design speeds and traffic volumes in the vicinity of the site access. A summary of the survey results is provided in **Figure 2.2**, and the full survey data is provided at **Appendix A**.

Direction	AADT	HGV%	Average Speed	85 th Percentile Speed
Northbound	144	13%	22mph	27.8mph
Southbound	145	14.2%	22.7mph	28.2mph

Figure 2.2: Summary of ATC Survey Results

Existing Access Visibility Constraint

- 2.3.2 To assess visibility at the existing site access, Stopping Sight Distances (SSD) have been calculated based the recorded 85th percentile design speeds recorded during a 7-day ATC survey, using the calculation coefficients set out in Manual for Streets. A summary of the required and achievable stopping sight distances is provided in **Figure 2.4**.

Direction	85 th Percentile Design Speed	Manual for Streets SSD
Eastbound	27.8mph	38.5m
Westbound	28.2mph	39.3m

Figure 2.4: Required Stopping Sight Distances

- 2.3.3 The required visibility splays are illustrated in **Drawing 2025-6829-101**. Visibility to the east of the existing access is obstructed by the frontage hedgerow,. Although the hedge row could be removed it would result in significant ecology and landscape impacts, and requiring a large part of the field to be secured to provided visibility.

2.4 Collision Data

- 2.4.1 To assess highway safety in the vicinity of the site, a review of collision data was undertaken using data obtained from the Sussex Safer Roads Partnership's (SSRP) online data portal, for a five-year period between January 2019 and January 2025.
- 2.4.2 Collisions are classified as 'slight', 'serious' and 'fatal' depending on the severity of the injuries sustained. Patterns displayed in the data can be assessed with regard to the proximity, frequency and severity of the incidents to establish whether there are underlying highway design issues on the local road network that may require a more detailed investigation.
- 2.4.3 The area considers Binsted Lane for a distance of 500m to the north and south of the site. A map demonstrating the extent of the study area and each recorded incident is demonstrated in **Figure 2.5**.

Figure 2.5: Incident Distribution

- 2.4.4 No incidents were recorded within the study area over the five-year study period. The assessment therefore not show any evidence of incident patterns that that could be exacerbated by the proposals.

3 PROPOSED ACCESS

3.1 Overview

- 3.1.1 The proposal would involve the construction of a new field access situated at a point providing improved visibility to serve a new glamping site.

3.2 Access

- 3.2.1 The existing field access would be closed and would be replaced by the new access situated c.30m to the west. The proposed access would comprise of a 4.1m wide direct access with 2.0m wide chamfers in accordance with DMRB CD123 standards. A gate would be provided, set back 6.0m from the carriageway edge, allowing vehicles cars to wait clear of Binsted Lane when opening the gate.
- 3.2.2 The first 6.0m in front of the gate would have a metaled surface to prevent materials from the fiend being transferred to the highway. The proposed access is shown on **Drawing 2025-6829-001**.

Visibility Requirements

- 3.2.3 Visibility requirements at the proposed access have been based on the 85th percentile design speeds recorded during a 7-day ATC survey (**Section 2.3**). In accordance Manual for Streets guidance, splays measuring 2.4m x 39.3m have been provided looking south (primary direction) and splays looking 2.4m x 38.5m have been provided looking north (secondary direction). Visibility splays from the site egress are demonstrated as achievable in **Drawing 2025-6829-001**.
- 3.2.4 The existing hedge along the site frontage would require some maintenance to be maintained behind the visibility envelope on both sides of the proposed access to achieve the required visibility envelope as indicatively shown in **Drawing 2025-6829-001**.

3.3 Vehicle Swept Path Analysis

- 3.3.1 A vehicle-swept path analysis has been undertaken to review the operation of the proposed access arrangements. The vehicle swept path analysis demonstrates the following manoeuvres: -
- i. Access and egress by a large estate car in **Drawing 2024-6829-002**
 - ii. Access and egress manoeuvres by a 4.6t light van in **Drawing 2024-6829-002**.

3.4 Emergency Access

- 3.4.1 In accordance with Building Regulations Part B, the following design compliances are met: -
- i. Fire tenders would be able to access within 45.0m of all plots.

- ii. Fire tenders could achieve an appropriate level of access without requiring reversing distance greater than 20.0m.

3.4.2 The site's geometries would allow a fire tender (the largest emergency vehicle) to comfortably access the proposed site. A vehicle swept path analysis has been undertaken demonstrating fire tenders negotiating the site access and performing turning manoeuvres in **Drawing 2025-6829-003**.

3.5 Servicing Arrangements

3.5.1 Refuse collection would be undertaken from Binsted Lane as per the existing servicing arrangements for the adjacent properties and public highway. Bins would be collected from a bin collection point located at the front of the site. The refuse collection arrangement is shown in **Drawing 2025-6829-003**.

3.6 Car Parking

3.6.1 Arun District Council's parking standards do not specify a requirement for camping sites. In the absence of specific standards, it is anticipated that each plot will require one designated car parking space. Site management will allocate plots, ensuring that a parking space is provided for each. While only one space per plot is anticipated to be required per plot, sufficient room will be available to accommodate two vehicles per plot if necessary.

3.7 Vehicle Trip Generation

3.7.1 For robustness, it has been assumed that the existing field does not generate any trips. Therefore all trips associated with the proposed glamping site would be new to the network.

3.7.2 The TRICS database does not contain data on vehicle trips associated with glamping or camping sites. Therefore, a robust assumption has been made that each plot would generate up to 5 movements per date in line with typical values for a dwelling.

3.7.3 Based on this assumption, the proposed development could generate up to 30 two-way vehicle movements per day. The number of daily vehicle trips resulting from the proposed development would have a negligible impact upon the local road network in terms of highway capacity and safety.

4 SUMMARY AND CONCLUSIONS

4.1.1 This TN has been prepared by Bright Plan on behalf of Diversify My Land to support a planning application for a new direct vehicle access serving a glamping site on Land to the South of Black Horse Pub, Binsted Lane. The findings from this report are as follows:

- i. The site is currently served from an existing field access at the northeast corner of the field.
- ii. A 7-day ATC survey has been undertaken to establish vehicle speeds in the vicinity of the site. The survey identified 85th percentile design speeds of 27.8mph northbound and 28.2mph southbound.
- iii. Visibility to the east of the existing access is obstructed by the frontage hedgerow, preventing visibility from being achieved.
- iv. A review of collision data showed no pattern of incidents in terms of distribution, frequency or severity that would be of concern in terms of highway safety.
- v. The proposed access would comprise of a relocated access, with a gate set back 6.0m from Binsted Lane carriageway.
- vi. Visibility is achievable looking in both directions from the proposed access based on the recorded design speed calculated using Manual for Streets requirements calculation coefficients.
- vii. A vehicle-swept path analysis has been undertaken demonstrating the negotiation of the access by estate cars and light vans.
- viii. The site's geometries can appropriately accommodate emergency vehicles.
- ix. Refuse collection would be undertaken from Binsted Lane. Bins would be collected from a bin collection point located at the front of the site.
- x. Sufficient room will be available to accommodate two vehicles per plot.
- xi. An assumption has been made that each plot would generate c.5 vehicle trips per day. The proposed development could generate up to 30 two-way vehicle movements per day.
- xii. The number of daily vehicle trips resulting from the proposed development would have a negligible impact upon the local road network in terms of highway capacity and safety.

Document Key:

Time	Each survey day is broken down by hours, showing an hour for each direction of travel in rows. The time displayed here represents the hour timeframe for example 0300 represents all vehicle movements from 03:00 until 03:59:59.
Cls	Vehicle Class: Further information regarding vehicle class breakdown can be found by looking at the table on the 'Classifications' tab.
Cd	Compass Direction: North (N) East (E) South (S) West (W) refers to the direction of travel for vehicle data in that row.
Total	Total number of vehicle records collected for this direction and timeframe.
Vbin	These are the speed bins used to categorise the speed of the vehicles for each of the time frames in rows.
Mean	This column displays the average speeds of all vehicle data collected for that direction & timeframe. This will be blank if the timeframe & direction collected no vehicle data for this period.
Vpp 85	This refers to the speed percentile point. Followed by the '85' this indicated the values being shown are the 85th percentile for the speeds collected by timeframe and direction. Please note: 85th percentile calculations are unable to be provided for timeframes & directions where there are less than 10x vehicle movement. Instead, this row entry will display as blank.
Grand Total	This tab represents the total volume of vehicles for each class and speed bin collected over the duration of the survey, displayed by direction.
