Hello Laura,

Thank you for your time over the phone and allowing for us to contact you on an alternative e-mail. (I have attached your original e-mail for convenience to see which items were still outstanding)

We have prepared a detail explaining how we will connect SW runs into the permeable paving system – please see YAP-130-SK004 drawing attached.

This connection will happen in a chamber that will be wrapped in a geotextile, have permeable base and sides and thus will be an integral part of the permeable paving system at the connection points. This will allow us to make physical connection into the permeable paving system at a level not less than the calculated water level during the 1 in 10 + 40% cc storm event. We will still have a low level connection into the Permavoid units using proprietary fitting, but the entry to the overall permeable paving system will be as described thus complying with the LLFA surface water management policy.

We have already revised the drainage layouts to show the levels for each connection points – please see drawings YAP-130-081 and 082.

The connection levels are set so they are above water level in respective road types Microdrainage calculations submitted previously (i.e. for road types 2 and 3 and as explained in the attached e-mail).

We have also revised SuDS maintenance plan and have now a section dedicated to the drainage channels as discussed over the phone and updates silt trap location for Plot 23.

We would really appreciate if you could kindly find some time to review the attached details and perhaps if you will be happy with them Paul - in your absence next Tuesday - could recommend discharge of drainage planning conditions?

Kind Regards

Hi Arek,

Good to chat with you. As discussed, once you have come up with an idea for the detail you wish to use to address point 11 please feel free to email this over to me so I can let you know whether this will be appropriate. As discussed please copy in my Adur Worthing email address as I check this more frequently and should hopefully be able to pick this up prior to the 6th April when I will hopefully review the full package of information. My Adur Worthing email address is copied in on this and is [REDACTED]

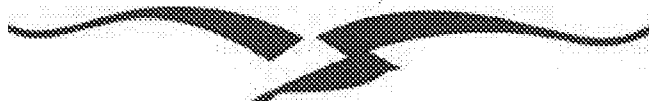

Kind regards,

Laura Gibbons

Drainage Engineer
