Good Morning Mr Tidey,

With regards to the first part of your email, yes.

If the tree is dead then it can be removed from the application, you can write to our parks department to be issued with 5-day permission notice that relates to dead, dying or dangerous trees. Please inform me if you go ahead and do this, as then tree 1045 can be removed from the application.

Many thanks,

Zac

Hello Zac Denton,
Thanks for your email yesterday (Monday 22nd).
Your requests for clarifications are being looked over and will be with you shortly, but I have a few questions if I may.

Where you are asking "Please detail the number and species of trees in group" the reason for the grouping is that the groups are formed of outgrown hedging plants. There is a large number of stems (as would be expected of a hedge) of various sizes, the outgrown nature of these hedges means that there are now stems over 75mm@DBH. Are you after information on all stems over 75mm@DBH?

For tree 1045 the species is unknown as the tree is a standing dead stem that is covered in Ivy, so identification is not possible. I have included this tree in the request as it has a large trunk and with a height of 3.5m, this is included in the application to stop future issues relating from the tree removal. Should I remove this tree from the application as it is under the dead exemption criteria.

Thank you for your time.

Kind Regards

Ben Tidey
