

PROPOSED SCHEDULE OF WORKS: -

**WALNUT TREE COTTAGE
CHURCH ROAD
YAPTON**

T1 YEW. On north-western boundary adjacent to Church road. Crown reduction by a maximum of 1.0 (one) meter all round (2.0 meter overall on diameter) with the exception of side immediately adjacent to carriageway where the intention is to restrict lateral pruning to align just within the yellow road markings immediately beneath. (approx. 0.35m), so as to maintain form as best as.

REASON:-To maintain a smaller tree and clear highway. General maintenance.

T1 YEW

T1 YEW

T2 CONIFER. Adjacent to roadside garage/light. Crown height reduction by maximum 1.8m. and lateral prune to maintain form. To clear around street light and overhang above neighbours garage. The conifer shades the street light causing it to illuminate at inappropriate times during daylight hours.
REASON:- To maintain a smaller tree. To clear away from street light and neighbours garage. General maintenance.

T2 CONIFER

T3 PETTISPORUM. Adjacent to car port. Crown height reduction by a maximum of 2.0 m and lateral prune to maintain form. As is evident from the supporting photo's the tree is inclined and leaning over the carport. Due to the weight and extent of the canopy there is a concern, particularly in windy conditions, that both the tree and carport may suffer damage. I do not wish to see this tree felled.

REASON:- To maintain a smaller tree. Reduce weight of canopy and overhang above car port.

T3 PETTISPORUM

T3 PETTISPORUM

T4 MAPLE:- Crown reduction by a maximum of 1.5 m all round (3.0 m on overall diameter). Prune to maintain form.

REASON:- To maintain a smaller tree. To allow light to adjacent Pettisporum (T3) and encourage growth (to T3) on the opposite side to which it ,(T3) is currently leaning. General maintenance.

T4 MAPLE

T5 & T6 PETTISPORUM. Along side southern boundary line . Crown height reduction of 2.0m maximum. Lateral prune to maintain form.

REASON:- To maintain smaller tree/s and reduce the possibility of the trees incurring damage in windy conditions. General maintenance.

T5 & T6 PITTISPORUM

Should the above tree works be allowed they will be carried out in accordance with BS 3998:2010 and in strict observance of any informatives recieved with regard to nesting wild birds and the disturbance of bats and/or their roosts.
Supporting photos are current as of January 2020.
