Subject: Fwd: Planning Decision on Y/117/20/TC

Dear Zoe

Thank you for the attached planning decision on our Sycamore tree (Y/117/20/TC)

Following your decision, we have been in touch with a few tree surgeons who have advised us to have the tree removed due to the damage on our Grade II listed Georgian flint wall next to it (see attached pictures)

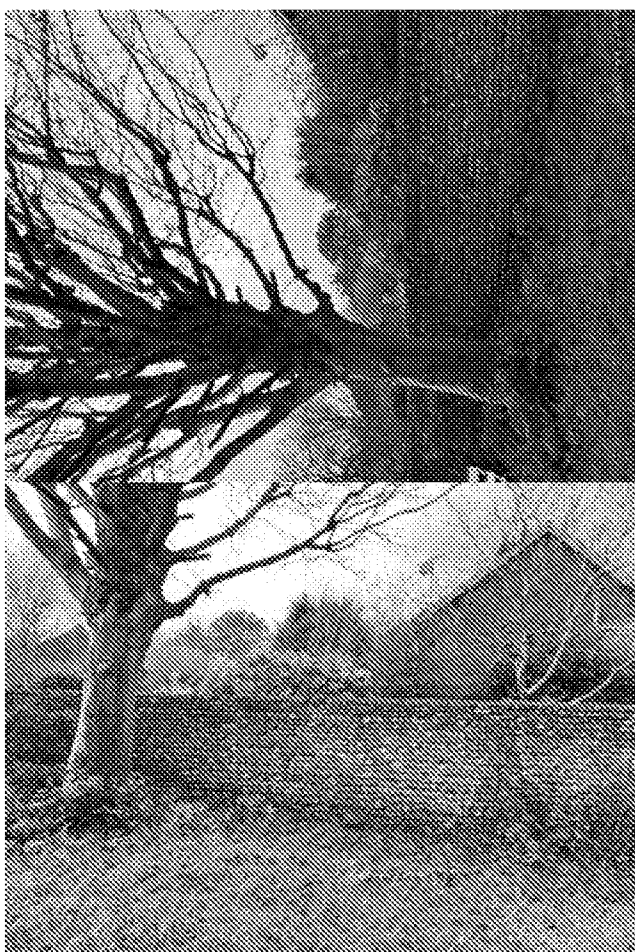

We are concerned that the tree will continue to put pressure on the wall and the wall will collapse which will cause considerable damage and cost due to the age of the flint wall. I have supplied some photos below, where you can see the wall has bowed where the tree is, the wall by the tree is leaning over into next door's garden, the wall has several major cracks caused by the tree. Overall, the tree is causing major damaged to the wall that it will all collapse and I cannot afford to have it repaired if this happens. We would look at planting more suitable foliage in its place that should not affect the wall.

I am conscious of time on this.

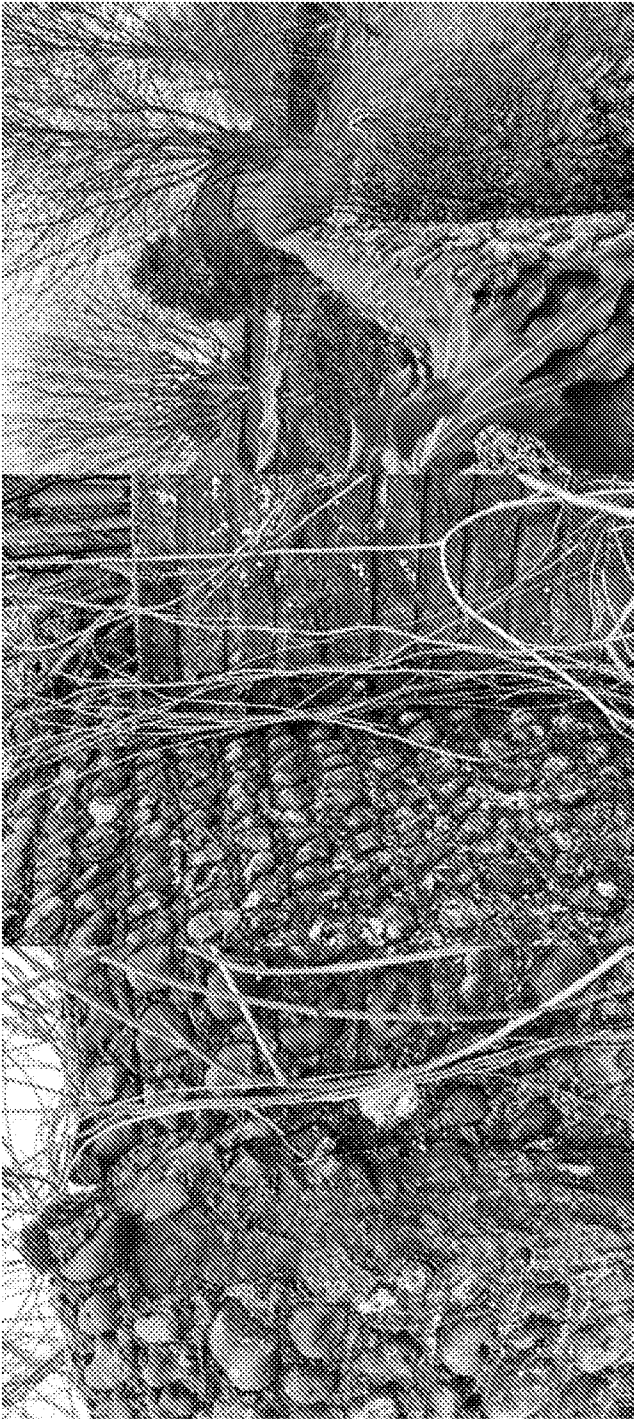

Could you please advise if we can have the tree removed.

Best regards

Paul Lightfoot
