Appendix H Arun DC Surface Water Checklist

1.0 INTRODUCTION

1.1.1 Odyssey has been commissioned by Redrow Homes to prepare this drainage report in support of their Reserved Matters (RM) application for the residential development at Ford Lane, Yapton. This follows the grant of outline planning permission on 15th January 2019 (Ref: Y/80/16/OUT). This report also sets out the background, existing drainage regime, proposed drainage regime, overland flow routes and maintenance of SuDS features.

1.1.2 The description of the development at the outline application was:

"Outline application with some matters reserved for 4.5 hectares of residential development comprising 3.4 hectares of land for up to 100 dwellings (up to 30 (30%) affordable housing) together with 1.1 hectares of land set aside for public open space and strategic landscaping and 2.2 hectares of public open space and green corridors with vehicular access from Ford Lane and pedestrian/cycle access only from North End Road."

ARUN DISTRICT COUNCIL Y/26/21/DOC

2.0 EXISTING SITE

2.1.1 The proposed development site comprises 6.7ha of greenfield land and is located off Ford Lane to the north east of Yapton Village in West Sussex. The site is surrounded by arable land to the north and east, Orchard Business Park and residential dwellings to the south and North End Road to the west.

2.1.2 The topographical survey shows the site to be relatively flat with one half of the site falling from north to west and the other falling from north to south. Levels range from approximately 8.24m AOD in the north to 6.46m AOD in the west.

2.1.3 It is understood that there are no public surface water sewers in close proximity to the site and the existing drainage regime relies on surface water infiltrating through the underlying strata.

2.1.4 An intrusive ground investigation was conducted by Eastwood & Partners in October 2019. A total of 5 No. sample pits were excavated up to a maximum depth of 4m bgl across the development site to allow for the installation of groundwater monitoring wells. The findings in their report indicate that the existing geology consists predominantly of river terrace sands and clays underlain by the chalk.

2.1.5 In accordance with the Arun DC requirements, ten rounds of groundwater monitoring were completed during the winter period (October to March inclusive) and groundwater was encountered at depths ranging between 2.79 – 6.57m bgl.

2.1.6 In January 2020, infiltration testing was also completed at 5 locations across the site. Each location underwent two tests, one shallow and one deep. The shallow tests had a base depth of around 1m and the deeper tests around 3m. Results from the testing identified rates that ranged from 5.50 x 10-6m/s and 0.13 x 10-6m/s.

2.1.7 It is also understood that there are no foul water sewers present within the site. The nearest public foul water sewer is located in North End Road and currently serves existing residential dwellings in the surrounding area.

ARUN DISTRICT COUNCIL Y/26/21/DOC

3.0 PROPOSED DRAINAGE

3.1.1 New foul and surface water drainage networks are proposed across the development site. The proposed foul and surface water drainage designs are shown on Odyssey **Drawings 18-344/800-802** provided with this report in **Appendix A**.

3.2 Design Criteria

3.2.1 The design criteria applied for the proposed drainage are as follows:

- Pipework beneath existing and proposed highways is to have cover of at least 1.2m where possible
- Private foul and surface water drainage is to be in accordance with Approved Document H of the Building Regulations
- Adoptable drainage is to be in accordance with Sewers for Adoption
- 10% urban creep has been allowed for the dwellings' hard standing areas (roofs and garages)

3.3 Surface Water Drainage

3.3.1 The proposed surface water scheme has been designed in accordance with the strategy set out in the Flood Risk Assessment (FRA) submitted as part of outline planning application for the site. The FRA proposes the use of sustainable drainage techniques to control the surface water from the development.

3.3.2 Based on the testing undertaken by Eastwood & Partners, the infiltration potential varies across the site for both shallow (1m) and deep (3m) tests/rates. The design is to infiltrate surface water run-off for the whole development from roads, roofs, parking bays and parking courts into the existing strata either with shallow systems or at depth depending on the infiltration rates in the associated infiltration areas.

3.3.3 The site is split into various catchment areas and infiltration rates as shown on **drawing 18-344/108** in **Appendix D** and **drawing 18-344/110** in **Appendix E**. Principally, the west part of the site drains into permeable paved drives/roads or courtyards, the central/northern areas into permeable paved drives/roads or cellular soakaways, the eastern side into permeable paved drives/roads and rear garden soakaways, with some perimeter visitor parking to a boundary swale via gullies. The southern area drains to permeable drives or rear garden soakaways with a small hard paved area/catchment draining via kerb drains to the basin in the open space.

ARUN DISTRICT COUNCIL Y/26/21/DOC

3.3.4 The surface water drainage systems have been designed to accommodate all rainfall events up to 1 in 100-year event plus climate change (+40%) with no flooding. Due to some lower/slower inflation rates and extended drain times additional capacity has been added into the drainage storage/systems to allow for further storms over and above the 1 in 100 year + CC. Supporting calculations can be found within **Appendix G**. The remaining depth in the structures above the highest storms/water level shows the extra over capacity provided/available.

3.3.5 At the request of Arun District Council, Odyssey has undertaken drainage calculations to test the system under the conditions of a modelled 1 in 10-year flood event plus climate change event. Sample worst case assessments have been provided in **Appendix G**.

3.3.6 Surface water treatment would be provided by the permeable paving via both the grit layer and geotextile that the blocks are bedded on, as well as the underlying gravel media comprising of washed no fines material. These measures provide filtration and the breakdown of hydrocarbons as the water is conveyed through the system and into the piped network.

3.3.7 The swales and basin are open features which offer some treatment and attenuation locally and provide a softer and aesthetic/enhanced landscape to those areas.

3.4 Maintenance and Management Plan

3.4.1 The details for the maintenance and management of the surface water network and SuDS features is covered under a separate report (Odyssey Report reference **18-344-13 Management & Maintenance Manual**). The surface water features/systems for the whole site will be kept private and maintained by a maintenance and management company.

3.5 Urban Creep

3.5.1 The CIRIA SuDS Manual states that urban creep is defined as any increase in the impervious area that is drained to an existing drainage system without planning permission being required, and therefore without any consideration of whether the capacity of the receiving sewer system can accommodate the increased flow. An increase of 10% has been applied to areas which may be subject to urban creep to allow for future urban expansion on a local scale.

3.6 Foul Drainage

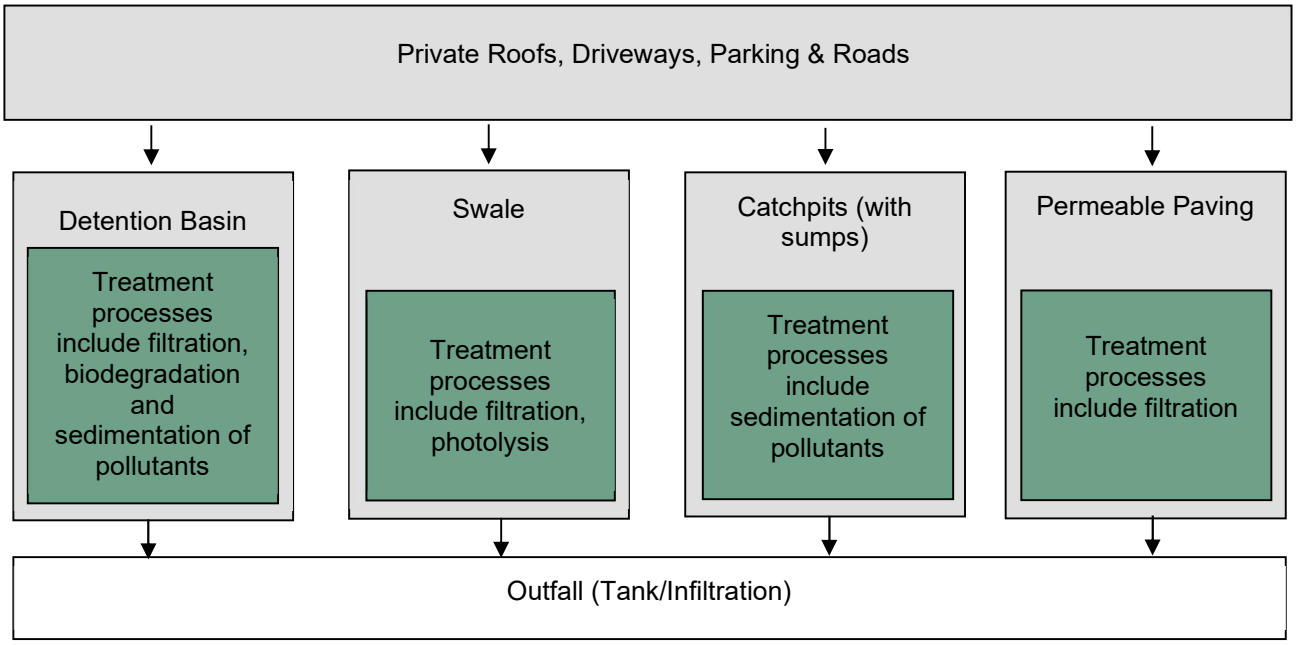

3.6.1 The proposed foul water drainage design utilises a combination of gravity and pumped systems.

3.6.2 It is proposed that foul flows from the development will be conveyed and discharged into the existing Southern Water sewer located in the North End Road via a new manhole.

3.6.3 Due to the existing topography of the site, foul flows from a number of dwellings to the east would be conveyed to a Southern Water adopted pumping station located towards the south of the site before being pumped north via a rising main into the main network.

4.0 TREATMENT OF SURFACE WATER RUN-OFF

4.1.1 Surface water will be subject to the following treatment train prior to infiltration. The levels of proposed treatment are shown below.

5.0 OVERLAND FLOW ROUTES AND EXCEEDANCE ROUTES

5.1.1 The calculations provided in **Appendix G** show there to be no flooding for storm events up to and including the 1 in 100 year event plus 40% climate change.

5.1.2 Overland flow routes have been shown on Odyssey **drawing 18-344/107**, which is supplied in **Appendix D**.

5.1.3 As an extra over provision, a bund has been proposed at the southern end of the site. This will allow for any overland flow to be contained within the open space area and channelled to the east. The full extent of this can be seen on Odyssey **drawing 18-344/802** in **Appendix A.**

6.0 CONCLUSION

6.1.1 The surface water drainage scheme for this site proposes a mixture of piped/cellular storage systems, permeable paving and open features ultimately leading to discharge/disposing of surface water via infiltration into the existing ground below.

6.1.2 Treatment is provided in the form of silt traps/sumps, permeable paved roads/drives, swales and a basin.

6.1.3 All system/features are design to accommodate the 100 year event + 40% climate change with some spare capacity over and above this.

6.1.4 The surface water systems/features will be kept private and maintained by a private management company.

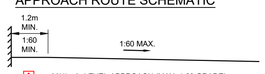

6.1.5 The foul will discharge via gravity and an onsite pumping station/rising main to the existing Southern Water sewer in North End Road.

APPENDIX A

NOTES

1. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELATED DRAWINGS ISSUED BY THE ARCHITECT AND ENGINEER, SEWERS FOR ADOPTION SIXTH/SEVENTH EDITION, WEST SUSSEX COUNTY COUNCIL STANDARDS AND BOVIS HOMES STANDARDS.
2. DO NOT SCALE FROM THIS DRAWING. WORK FROM FIGURED DIMENSIONS ONLY.
3. ALL DIMENSIONS SHOWN IN METRES UNLESS NOTED OTHERWISE.
4. ALL DIMENSIONS, LEVELS AND SURVEY GRID CO-ORDINATES ARE TO BE CHECKED ONSITE AND THE ENGINEER NOTIFIED IMMEDIATELY OF ANY DISCREPANCIES PRIOR TO THE COMMENCEMENT OF THE WORKS.
5. NO DEVIATION FROM THE DETAILS SHOWN ON THIS DRAWING IS PERMITTED WITHOUT PERMISSION FROM THE ENGINEER.
6. CONTOURS SHOWN ON THIS DRAWING ARE AT 20mm VERTICAL INTERVALS.
7. THIS DRAWING IS BASED ON THE PLANNING LAYOUT PROVIDED BY GEOFF PERRY ASSOCIATES. DRAWING REFERENCE A855_65A_.
8. TOPOGRAPHICAL SURVEY WAS UNDERTAKEN BY MK SURVEYS IN OCTOBER 2019.
9. WATERPROOFING TO BE INSTALLED IN ACCORDANCE WITH NHBC CHAPTER 5.4 BY SUPPLIER/CONTRACTOR FROM DPC DOWNWARDS INCLUDING STEPPED FLOORS MORE THAN 150mm. RAISED DPC SHOWN ON THIS DRAWING IS IN AREAS WHERE FINISHED GROUND LEVEL IS LESS THAN 150mm BELOW FFL. EXPOSED BRIICKWORK/UNDERBUILD HAS BEEN INDICATED WHERE EXTERNAL LEVELS ARE GREATER THAN 150mm BELOW FFL.
10. PRIVATE FOUL WATER AND SURFACE WATER DRAINAGE IS TO BE CONSTRUCTED IN ACCORDANCE WITH THE BUILDING REGULATIONS, BS EN 752, NHBC STANDARDS CHAPTER 5.3 AND RELEVANT AGREEMENT CERTIFICATES.
11. PRIVATE DRAINS TO BE CONSTRUCTED USING UPVC BUILDING DRAINAGE SYSTEM PIPEWORK TO BS EN 1401, BEDDED AND BACKFILLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS AND THE SPECIFICATIONS LISTED IN NOTE 1.
12. INSPECTION CHAMBER SIZES ARE TO BE IN ACCORDANCE WITH THE BUILDING REGULATIONS PART H; TABLE 11 AND MANHOLE SIZES TABLE.
13. BACKFILLING OF DRAIN TRENCHES ADJACENT TO DWELLINGS OF OTHER STRUCTURES TO BE IN ACCORDANCE WITH THE BUILDING REGULATIONS PART H; DIAGRAM 8.
14. INSPECTION CHAMBER COVERS IN PRIVATE AREAS SHOULD BE GROUP 1 CLASS A15 IN PEDESTRIAN AREAS INACCESSIBLE TO WHEELED VEHICLES AND GROUP 4 CLASS D400 IN VEHICULAR AREAS.
15. ALL SOIL VENT PIPE, STUB STACKS, AIR ADMITTANCE VALVES AND RAIN WATER PIPE LOCATIONS ARE INDICATIVE ONLY. FOR ACTUAL LOCATIONS REFER TO ARCHITECTURAL PLANS AND ELEVATIONS.
16. SURFACE WATER FROM PRIVATE AREAS IS NOT TO BE DISCHARGED ONTO PROPOSED HIGHWAY.
17. DRAINS TO BE CONSTRUCTED UNDER DWELLINGS WITH SUSPENDED FLOOR SLABS SHOULD EITHER BE INSTALLED USING A PROPRIETARY HANGER SYSTEM WHERE "BEAM AND POT" OR SIMILAR CONSTRUCTION IS USED, OR SHOULD BE CAST INTO LOCAL SLAB THICKENING WHERE REINFORCED CONCRETE GROUND SLABS ARE TO BE POURED IN SITU.
18. DRAINS IN AREAS OF MADE GROUND TO BE CONSTRUCTED BY FIRST MAKING UP THE AREA TO APPROXIMATELY FINISHED LEVEL AND THEN EXCAVATE THROUGH THE FILL MATERIAL INTO UNDISTURBED GROUND. THE DRAIN TRENCH IS THEN TO BE BACKFILLED TO FORMATION LEVEL USING SUITABLE GRANULAR FILL MATERIAL WELL COMPACTED IN LAYERS NOT EXCEEDING 225 THICK.
19. ALL RWP'S TO HAVE RODDING ACCESS.
20. ALL FOUL AND SURFACE WATER DRAINAGE PIPES WITHIN PRIVATE AREAS TO BE 100mm Ø UNLESS SPECIFIED OTHERWISE.
21. FIRST SURFACE WATER INSPECTION CHAMBERS TO BE 600mm DEEP UNLESS SPECIFIED OTHERWISE.
22. FIRST FOUL SEWER INSPECTION CHAMBERS TO BE 750mm DEEP UNLESS SPECIFIED OTHERWISE.
23. IN COMPLIANCE WITH CDM 2015 ODYSSEY HAS FOLLOWED IT'S DESIGN RISK MANAGEMENT PROCESS FOR HAZARD ELIMINATION AND RISK REDUCTION IN DEVELOPING THE ODYSSEY DESIGNS SHOWN ON THIS DRAWING. THERE ARE NO ABNORMAL OR UNUSUAL RESIDUAL RISKS ASSOCIATED WITH THE DESIGN. ANY OTHER RESIDUAL RISKS ARE THOSE THAT WOULD NORMALLY BE EXPECTED BY COMPETENT PERSONS OR CONTRACTORS ENGAGED ON WORK OF THIS NATURE OR TYPE.
24. FOUL DRAINAGE SUBJECT TO TECHNICAL APPROVAL FROM SOUTHERN WATER.
25. GEOTECHNICAL ENGINEER TO CONFIRM SOAKAWAY OFFSETS FROM BUILDINGS.
26. ALL DRAINAGE CONNECTIONS DIRECTLY TO SEWERS TO BE MADE VIA OBLIQUE 45° JUNCTIONS.

LEVEL/BUND IN THIS AREA TO BE MANIPULATED TO ENCOURAGE OVERLAND FLOWS TO FALL TO THE EAST

PROPOSED BUND WITH 1 IN 3 SIDE SLOPES. HEIGHT VARIES

THE BUILDING REGULATIONS: PART M APPROACH ROUTE SCHEMATIC

NOTES

1. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL OTHER RELATED DRAWINGS ISSUED BY THE ARCHITECT AND ENGINEER. SEWERS FOR ADOPTION SIXTH/SEVENTH EDITION, WEST SUSSEX COUNTY COUNCIL STANDARDS AND BOVIS HOMES STANDARDS.
2. DO NOT SCALE FROM THIS DRAWING. WORK FROM FIGURED DIMENSIONS ONLY.
3. ALL DIMENSIONS SHOWN IN METRES UNLESS NOTED OTHERWISE.
4. ALL DIMENSIONS, LEVELS AND SURVEY GRID CO-ORDINATES ARE TO BE CHECKED ONSITE AND THE ENGINEER NOTIFIED IMMEDIATELY OF ANY DISCREPANCIES PRIOR TO THE COMMENCEMENT OF THE WORKS.
5. NO DEVIATION FROM THE DETAILS SHOWN ON THIS DRAWING IS PERMITTED WITHOUT PERMISSION FROM THE ENGINEER.
6. CONTOURS SHOWN ON THIS DRAWING ARE AT 20mm VERTICAL INTERVALS.
7. THIS DRAWING IS BASED ON THE PLANNING LAYOUT PROVIDED BY GEOFF PERRY ASSOCIATES. DRAWING REFERENCE A855_42A .
8. TOPOGRAPHICAL SURVEY WAS UNDERTAKEN BY MK SURVEYS IN OCTOBER '19'.
9. WATERPROOFING TO BE INSTALLED IN ACCORDANCE WITH NHBC CHAPTER 5.4 BY SUPPLIER/CONTRACTOR FROM DPC DOWNWARDS INCLUDING STEPPED FLOORS MORE THAN 150mm. RAISED DPC SHOWN ON THIS DRAWING IS IN AREAS WHERE FINISHED GROUND LEVEL IS LESS THAN 150mm BELOW FFL. EXPOSED BRICKWORK/UNDERBUILD HAS BEEN INDICATED WHERE EXTERNAL LEVELS ARE GREATER THAN 150mm BELOW FFL.
10. PRIVATE FOUL WATER AND SURFACE WATER DRAINAGE IS TO BE CONSTRUCTED IN ACCORDANCE WITH THE BUILDING REGULATIONS, BS EN 752, NHBC STANDARDS CHAPTER 5.3 AND RELEVANT AGREEMENT CERTIFICATES.
11. PRIVATE DRAINS TO BE CONSTRUCTED USING UPVC BUILDING DRAINAGE SYSTEM PIPEWORK TO BS EN 1401, BEDDED AND BACKFILLED IN ACCORDANCE WITH THE MANUFACTURER'S INSTRUCTIONS AND THE SPECIFICATIONS LISTED IN NOTE 1
12. INSPECTION CHAMBER SIZES ARE TO BE IN ACCORDANCE WITH THE BUILDING REGULATIONS PART H, TABLE 11 AND MANHOLE SIZES TABLE.
13. BACKFILLING OF DRAIN TRENCHES ADJACENT TO DWELLINGS OF OTHER STRUCTURES TO BE IN ACCORDANCE WITH THE BUILDING REGULATIONS PART H, DIAGRAM 8.
14. INSPECTION CHAMBER COVERS IN PRIVATE AREAS SHOULD BE GROUP 1 CLASS A15 IN PEDESTRIAN AREAS INACCESSIBLE TO WHEELED VEHICLES AND GROUP 4 CLASS D400 IN VEHICULAR AREAS.
15. ALL SOIL VENT PIPE, STUB STACKS, AIR ADMITTANCE VALVES AND RAIN WATER PIPE LOCATIONS ARE INDICATIVE ONLY. FOR ACTUAL LOCATIONS REFER TO ARCHITECTURAL PLANS AND ELEVATIONS.
16. SURFACE WATER FROM PRIVATE AREAS IS NOT TO BE DISCHARGED ONTO PROPOSED HIGHWAY.
17. DRAINS TO BE CONSTRUCTED UNDER DWELLINGS WITH SUSPENDED FLOOR SLABS SHOULD EITHER BE INSTALLED USING A PROPRIETARY HANGER SYSTEM WHERE "BEAM AND POT" OR SIMILAR CONSTRUCTION IS USED, OR SHOULD BE CAST INTO LOCAL SLAB THICKENING WHERE REINFORCED CONCRETE GROUND SLABS ARE TO BE POURED IN SITU.
18. DRAINS IN AREAS OF MADE GROUND TO BE CONSTRUCTED BY FIRST MAKING UP THE AREA TO APPROXIMATELY FINISHED LEVEL AND THEN EXCAVATE THROUGH THE FILL MATERIAL INTO UNDISTURBED GROUND. THE DRAIN TRENCH IS THEN TO BE BACKFILLED TO FORMATION LEVEL USING SUITABLE GRANULAR FILL MATERIAL WELL COMPACTED IN LAYERS NOT EXCEEDING 225 THICK.
19. ALL RWP'S TO HAVE RODDING ACCESS.
20. ALL FOUL AND SURFACE WATER DRAINAGE PIPES WITHIN PRIVATE AREAS TO BE 100mm Ø UNLESS SPECIFIED OTHERWISE.
21. FIRST SURFACE WATER INSPECTION CHAMBERS TO BE 600mm DEEP UNLESS SPECIFIED OTHERWISE.
22. FIRST FOUL SEWER INSPECTION CHAMBERS TO BE 750mm DEEP UNLESS SPECIFIED OTHERWISE.
23. IN COMPLIANCE WITH CDM 2015 ODYSSEY HAS FOLLOWED IT'S DESIGN RISK MANAGEMENT PROCESS FOR HAZARD ELIMINATION AND RISK REDUCTION IN DEVELOPING THE ODYSSEY DESIGNS SHOWN ON THIS DRAWING. THERE ARE NO ABNORMAL OR UNUSUAL RESIDUAL RISKS ASSOCIATED WITH THE DESIGN. ANY OTHER RESIDUAL RISKS ARE THOSE THAT WOULD NORMALLY BE EXPECTED BY COMPETENT PERSONS OR CONTRACTORS ENGAGED ON WORK OF THIS NATURE OR TYPE.
24. FOUL DRAINAGE SUBJECT TO TECHNICAL APPROVAL FROM SOUTHERN WATER.
25. GEOTECHNICAL ENGINEER TO CONFIRM SOAKAWAY OFFSETS FROM BUILDINGS.
25. ALL DRAINAGE CONNECTIONS DIRECTLY TO SEWERS TO BE MADE VIA OBLIQUE 45° JUNCTIONS.

TYPICAL MANHOLE DETAIL - TYPE 2

DEPTH FROM COVER LEVEL TO SOFFIT OF PIPE 1.5m - 3m

TABLE B.1

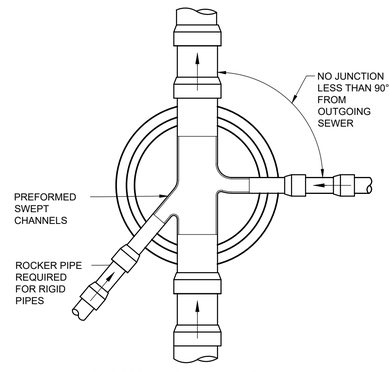

NOMINAL INTERNAL DIAMETER OF LARGEST PIPE IN MANHOLE (mm)	MINIMUM NOMINAL INTERNAL DIMENSION OF MANHOLE (mm)
LESS THAN 375	1200
375 - 450	1350
500 - 700	1500
750 - 900	1800
GREATER THAN 900	PIPE DIAMETER + 900

TYPICAL MANHOLE DETAIL - TYPE 1B

DEPTH FROM COVER LEVEL TO SOFFIT OF PIPE 3-6m

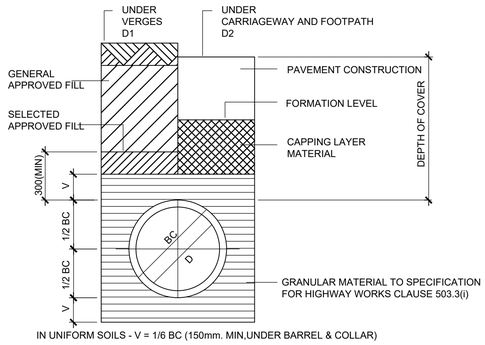

RIGID PIPES BUILT INTO MANHOLE SHOULD HAVE A FLEXIBLE JOINT AS CLOSE AS FEASIBLE TO THE EXTERNAL FACE OF THE STRUCTURE AND THE LENGTH OF THE NEXT ROCKER PIPE SHOULD BE SHOWN

NOMINAL DIAMETER (mm)	MAXIMUM EFFECTIVE LENGTH (m)
150 - 600	0.6
601 - 750	1.00
OVER 750	1.25

ALL PIPES ENTERING THE BOTTOM OF THE MANHOLE TO HAVE SOFFITS LEVEL

TYPICAL ARRANGEMENT OF PIPE JUNCTIONS WITHIN MANHOLES

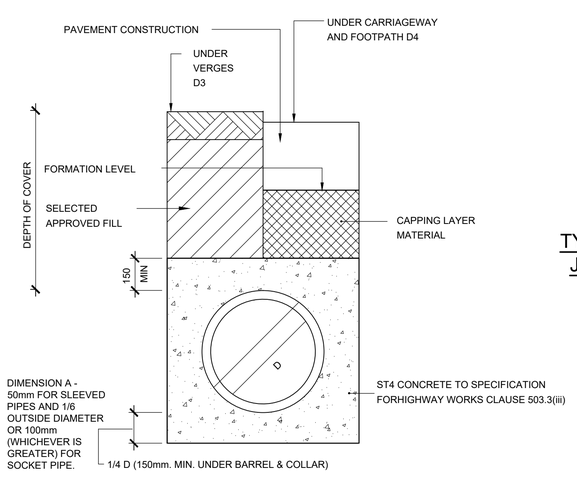

IN UNIFORM SOILS - V = 1/6 BC (150mm. MIN,UNDER BARREL & COLLAR)

IN MIXED SOILS CONTAINING IRREGULAR HARD SPOTS - V = 1/4 BC (200mm. MIN)

DESIGN D1 (UNDER VERGES - >900 COVER)
DESIGN D2 (UNDER CARRIAGEWAYS - >1200 COVER)

1. WIDTH OF TRENCHES TO BE CONFIRMED BY THE CONTRACTOR ON SETTING OUT INFORMATION.
2. ALL PIPES & CULVERTS SHALL HAVE FLEXIBLE JOINTS
3. DESIGN D3/4 SHALL BE USED WHEN THE COVER FROM TOP OF PIPE TO FINISHED LEVEL IS LESS THAN 900 WITHIN THE HIGHWAY & 900 IN VERGES ETC.
4. IN DESIGN D3/4 A 20 GAP SHALL BE FORMED IN THE CONCRETE SURROUND AT THE OUTER END OF THE SOCKET AT EACH FLEXIBLE JOINT. THE GAP SHALL EXTEND TO THE FULL THICKNESS OF THE CONCRETE & SHALL BE FILLED WITH SOFT FIBRE BOARD, EXPANDED POLYSTYRENE OR SIMILAR APPROVED MATERIAL.

BEDDING DETAIL - CLASS 'S'

DESIGN D3 (UNDER VERGES - <900 COVER)
DESIGN D4 (UNDER CARRIAGEWAYS - <1200 COVER)

BEDDING DETAIL - CLASS 'Z'

	SWALE CATCHMENT	AREA = 247m²
	BASIN CATCHMENT *	AREA = 431m²

*TURNING HEAD FRONTING PLOTS 34 - 36 DRAINS DIRECTLY TO THE BASIN. TANKS 1 AND 2 ARE USED FOR INITIAL STORAGE WITH PARTIAL INFILTRATION AND THEN RELEASED AT A SLOW RATE TO A FURTHER DRAINAGE STRUCTURE BELOW THE BASIN. REFER TO ENGINEERING DRAWINGS FOR FURTHER DETAILS.

Online Controls for Storm

Hydro-Brake® Optimum Manhole: STANK 2 HB, DS/PN: S2.001, Volume (m³): 1.3

Unit Reference	MD-SHE-0046-7000-0410-7000
Design Head (m)	0.410
Design Flow (l/s)	0.7
Flush-Flo™	Calculated
Objective	Minimise upstream storage
Application	Surface
Sump Available	Yes
Diameter (mm)	46
Invert Level (m)	6.540
Minimum Outlet Pipe Diameter (mm)	75
Suggested Manhole Diameter (mm)	1200

Control Points	Head (m)	Flow (l/s)
Design Point (Calculated)	0.410	0.7
Flush-Flo™	0.120	0.7
Kick-Flo®	0.272	0.6
Mean Flow over Head Range	-	0.6

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

APPENDIX H

Arun DC Surface Water Checklist

Surface Water Drainage Proposal Checklist

This 'Surface Water Drainage Proposals Checklist' has been designed to clearly define Arun District Council's and Chichester District Council's expectations and requirements for any surface water drainage proposals, submitted for appraisal by the council's Engineers, during the planning process.

Please be aware that it is in your interest to provide all of the requested information, as this will allow the council's Engineers to quickly and efficiently review your proposals. The omission of any requested information may lead to delays in the planning process.

This document will be of help to any applicant, or drainage consultant, preparing to submit a 'Discharge of Conditions Application' relating to surface water drainage conditions. Alternatively, it can also be used earlier in the planning process, if the applicant wishes to avoid pre-commencement conditions relating to surface water drainage. The Town and Country Planning Regulations now require pre-commencement conditions to have the prior agreement of the applicant regarding their wording and use. Therefore, if you wish to avoid pre-commencement conditions, in relation to surface water drainage, you will need to submit proposals that provide the information requested in this checklist and also align with the requirements of the following documents:

West Sussex Policy for the Management of Surface Water (WSCC)
'Supplementary Requirements for Surface Water Drainage Proposals'. (Arun DC)
'Supplementary Requirements for Surface Water Drainage Proposals'. (Chichester DC)

By submitting all of the information requested by this checklist you will enable the council's Engineers to determine whether your proposals follow the hierarchy for sustainable drainage and will adequately drain the site.

Please be aware that it will be difficult for the council's Engineers to undertake a timely assessment of your application if you fail to provide any of the information requested.

Version 3.0 (20.11.2019)

Surface Water Drainage Proposal Checklist

Ground Investigation Results				
Results Required	**Results Provided?**			
Winter groundwater monitoring results (Please refer to guidance note 1 below)	**Yes**	X	**No**	
Period of winter groundwater monitoring Note 1	**From**	29/10/19		
	To	12/03/20		
Maximum recorded groundwater level	5.010 **mAOD** 2.790 **mBGL**			
Winter infiltration test results Note 2	**Yes**	X	**No**	
Date of winter infiltration testing	28/01/20			
Details of the location and depth of the infiltration testing Note 3	**Yes**	X	**No**	
Minimum infiltration rate Note 4	REFER TO REPORT **m/s**			

Guidance Notes

1. A full winters groundwater monitoring should be undertaken, (October to March inclusive) to enable the peak annual groundwater levels to be established. The extent of winter monitoring for developments of less than 5 properties should be discussed with the council's Engineers.
2. Infiltration testing should be undertaken during the wet winter months (typically January) and in line with BRE365, or a similar approved method. Tests should be repeated 3x, to replicate saturated ground conditions. Please note that infiltration testing is to be carried out at a time and depth agreed with the Councils engineers.
3. Infiltration testing should be undertaken at the location and depth of any proposed infiltration structures. This must be above the maximum recorded groundwater level in that vicinity.
4. The minimum infiltration rate obtained at the location and depth of the proposed infiltration structures should be used to inform the design of the structures.

Proposed Method of Surface Water Disposal				
Infiltration On-site, via soak-away structures	**Yes**	X	**No**	
If on-site infiltration is not to be used, has justification for this been provided? Note 5	**Yes**		**No**	
Attenuation (on-site) with a **restricted discharge to a watercourse** on, or adjacent to, the site	**Yes**		**No**	
Attenuation (on-site) with a **restricted discharge to a surface water sewer** on, or adjacent to, the site	**Yes**		**No**	
Attenuation (on-site) with a **restricted discharge to a foul water sewer** on, or adjacent to, the site	**Yes**		**No**	

Guidance Notes

5. If on-site infiltration is not being used to drain the site you will need to provide evidence that demonstrates on-site infiltration is unviable.

Drainage Design: Supporting Calculations							
Calculations Required		Calculations Provided?					
Infiltration Structures	Half-drain time for 10 year event (plus climate change allowance)	Yes	X	No			
		SEE CALCS Hours					
	Half-drain time for 100 year event (plus climate change allowance)	Yes	X	No			
		SEE CALCS Hours					
	Calculations demonstrating that the 1 in 100 year event, plus climate change allowance can be accommodated on-site. Note 7	Yes	X	No			
	Lowest base level of infiltration structure	REFER TO DRAWINGS mAOD mBGL					
	Has the design sought to provide treatment of potential contaminants? E.g. hydrocarbons.	Yes	X	No			
Attenuation and Subsequent Restricted Discharge	Pre-development run-off rate calculations	Yes		No			
		l/s					
	Proposed discharge rate Note 6	l/s					
	Calculations demonstrating that the 1 in 100 year event, plus climate change allowance can be accommodated on-site. Note 7	Yes		No			
	Has the design sought to provide treatment of potential contaminants? E.g. hydrocarbons.	Yes		No			
	If your proposed scheme incorporates any impermeable lined attenuation features we require calculations to demonstrate that appropriate resistance to floatation (due to groundwater levels) is catered for in the design	Yes		No			
	If you propose discharging into or altering an ordinary watercourse; have you sought Ordinary Watercourse/Land Drainage Consent? Note 8	Yes		No			
	If discharging to a watercourse, piped system or the sea, has the proposed drainage network been modelled against predicted top water levels for the 1 in 100 year storm event plus climate change allowance, within the existing system? Note 9	Yes		No			

Guidance Notes

6. Any proposed discharge rate must be less than, or equal to, the pre-development rate. Greenfield sites must use the mean flow rate (Qbar) and be based upon the area occupied by the development, ignoring significant open spaces. Please note that the minimum acceptable discharge rate is 2l/s when using formal flow control devices, unless otherwise agreed. Additionally, if you are developing a brownfield site, we expect you to provide fully detailed plans of the existing surface water drainage arrangements on site, including impermeable areas, gullies, outfalls, pipes & diameters, manholes, etc. We generally seek 50% betterment in terms of run off from brownfield sites.

7. The appropriate factor of safety from the table below must be applied to your calculations to ensure your design is fully in accordance with CIRIA R156/ CIRIA C753.

Factor of Safety Table						
Size of Area to be Drained	Consequences of failure					
	No damage or inconvenience		Minor inconvenience, e.g. surface water on car park		Damage to buildings or structures or roads.	
	Cv=1.0	Cv=0.75	Cv=1.0	Cv=0.75	Cv=1.0	Cv=0.75
<100 m^2	1.5	2	2	3	10	13
100m^2 to 1000m^2	1.5	2	3	4	10	13
>1000m^2	1.5	2	5	6.5	10	13

8. Ordinary Watercourse/Land Drainage Consent will need to be sought, ideally in parallel with planning permission, if you propose discharging into, culverting or altering a watercourse.
9. Modelling is required to ensure that problems, such as surcharged outfalls, are addressed.

Plans/Drawings/Diagrams				
Required	**Provided?**			
Plan detailing the location of groundwater monitoring and infiltration testing	**Yes**	X	**No**	
Detailed drainage layout plan Note 10	**Yes**	X	**No**	
Construction detail plans Note 11	**Yes**	X	**No**	
Exceedance flow route plans Note 12	**Yes**	X	**No**	
Impermeable area plan	**Yes**	X	**No**	
If ground levels are being raised ≥ 300mm above existing levels and is unavoidable, have fully detailed plans been provided, together with drainage proposals, to address any potential drainage related issues.	**Yes**	X	**No**	

Guidance Notes

10. Drainage layout plans should include:

- All surface water drainage pipes labelled with; diameters, pipe materials, falls and invert levels.
- All infiltrating and attenuating structures (including permeable paving) labelled with; dimensions, invert and cover levels.
- All manholes labelled with; cover levels, invert levels, cover types detailed.
- All silt traps clearly labelled with sump depths.
- Control structures with outflow rates and invert levels.
- Proposed/existing levels of any areas subject to ground raising, together with suitable measures/detailed drawings for the associated management of surface water runoff. Please note that ground raising should be avoided unless there are exceptional circumstances.

11. Site specific construction detail plans should be supplied if your proposed drainage scheme includes any of the following elements: pipe bed and surround; infiltrating structures; attenuating structures; manholes; catch-pits/silt traps; control devices; permeable paving; headwalls.
12. Unless specifically requested by the council's drainage engineers 'Exceedance Flow Route Plans' are only required for developments of more than 5 residential properties or more than 0.5ha of commercial development .
