

Please find below a summary of the updates to our report:

- The attenuation area has been removed from the no dig construction areas, with the subbase now being 0.01m deeper. Updated calculations and a revised layout have also been provided.
- Although all trafficked areas within root protection and no dig construction areas will be permeable, they will not be used to store surface water and will be designed by a specialist.
- An updated Tree Protection Plan has also been included within the report appendix.
