

The trees overhang the footpath, and often we have lorries either delivering to the Coop (next door) or driven by customers parking and brushing the lower branches of the trees, (sometimes lorries are parking on the pavement so the risk is higher). In addition there is a development going on on adjacent land and Kings Close will be widened making the risk higher.

One branch was broken off recently and landed on the pavement.

I am concerned at this risk to injury of pedestrians.

I have contacted a tree surgeon and he has said we need to lift the crown by 2m to lift the branches away from vehicles.

These will all be minor branches, no main branches will be cut or removed.
