Dear Sir

I am writing regarding the proposed housing development on the flood plain in Yaplön Road opposite the farm shop. Has anybody looked at this site after heavy rain has fallen it then resembles a lake.

Could you please tell me how the storm/surface water will be dealt with. Will it be by means of pipes & ditches to the water course along side the A259 which in turn continues to the rife which runs between the A259 and the beach at Elmer & thus into the sea or are there

alternative options to this or if so
which is the most likely course to be
taken?

Yours Sincerely
