

Description for tree works in a conservation area.

Tall trees, church road, yapton, BN18OEJ

1. Sycamore 15m in height.

Works to be carried out,

Fell.

The tree is beginning to suppress a Yew hedge and an Oak tree of which we feel would be benefited by the removal of the sycamore.

The tree is also on a raised bank/wall by the road that may raise some concerns as the tree matures.

The replanting of a more suitable species will be undertaken if tree is removed.

2. Hawthorn hedge 4m in height

Works to be carried out,

Reduce by 50% to 2m.

Hedge has overgrown, reduce top and sides to tidy.

3. Cypress(leylandii) 11m height.

Works to be carried out.

Fell

The tree has visibly depleted foliage and an increased shift in weight bias towards the garage /driveway.

4. Six Poplars 24m in height.

Works to be carried out.

Trees to be reduced down to 12m in height (40% reduction)

The row of poplar trees are continually shedding live branches and showing signs of heart decay in some cases. Due to the proximity of the trees in relation to both my client and their neighbours I have advised a heavy reduction.
